

# Place-based climate change planning: Overcoming the paralysis of uncertainty

Molly Cross, Ph.D.  
Wildlife Conservation Society

Flagstaff, AZ Climate Change Workshop  
Southwest Climate Change Initiative  
April 7-8, 2010

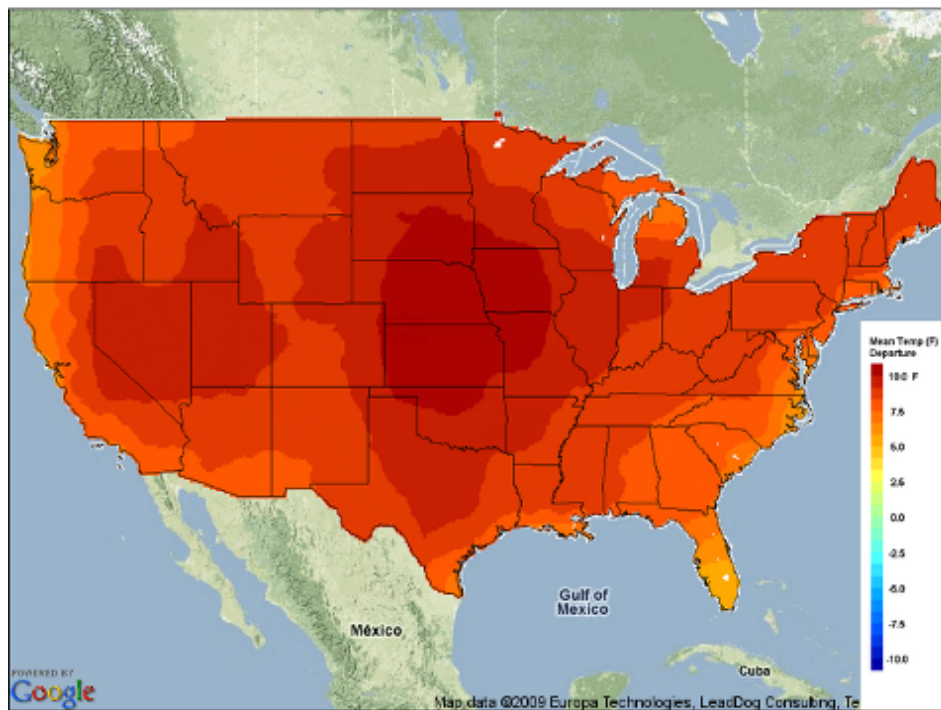

# Consequences of climate change

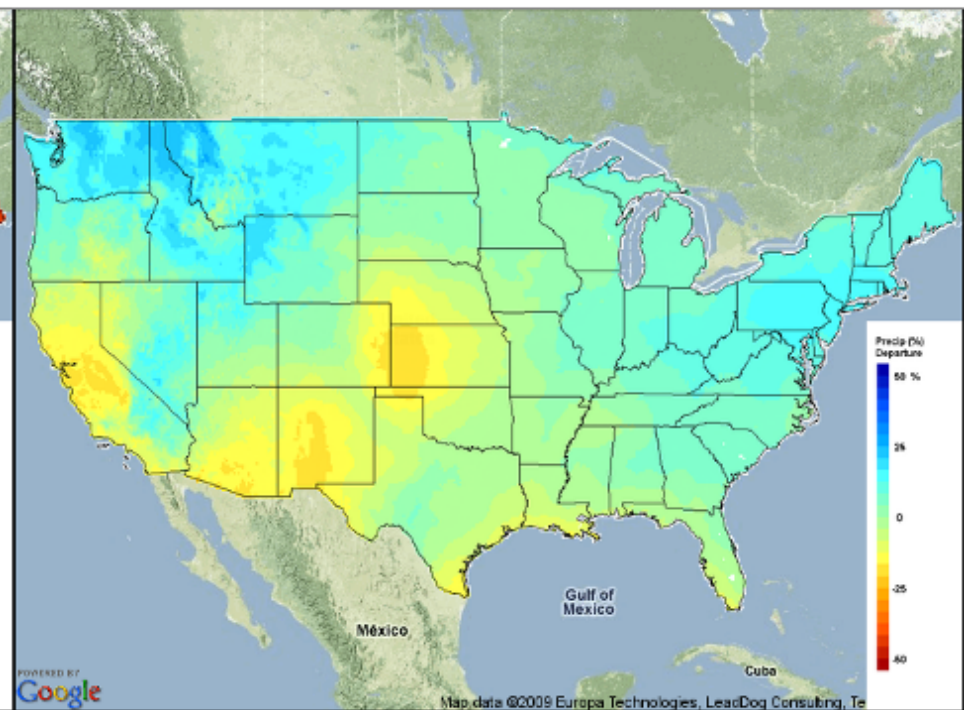

Change in Average Annual Temperature by 2100

Model: Ensemble Average, SRES emission scenario A2

Change in Average Annual Precipitation by 2100

Model: Ensemble Average, SRES emission scenario A2

Data Source: Base climate projections downloaded by Maurer, et al. (2007). We also acknowledge the following groups for providing the WCRP CMIP3 multi-model dataset available:  
Program for Climate Model Diagnosis and Intercomparison, The WCRP's Working Group on Coupled Modeling, and the Office of Science, US Department of Energy

# Climate change adaptation

**Adaptation** = actions that enable species or systems to better cope with or adjust to changing climate conditions.

# Challenges facing natural resource management

How to make  
applicable to  
my system?

Where to begin?

Uncertainty?  
Complexity?

What to  
manage FOR?

J. Kastner

# Reframing management goals

Increase **RESISTANCE** to change

Promote **RESILIENCE** to change

Enable ecosystems to **RESPOND** to change

Determine when to consider **TRIAGE**  
(setting and adjusting priorities)

# Challenges facing natural resource management

How to make  
applicable to  
my system?

Where to begin?

Uncertainty?  
Complexity?

What to  
manage FOR?

J. Kastner

# Climate Change Adaptation Framework

**Combines concepts from:**

- 1. ADAPTATION FOR CONSERVATION TARGETS (ACT) FRAMEWORK**  
developed by the Climate Change and Wildlife Conservation working group

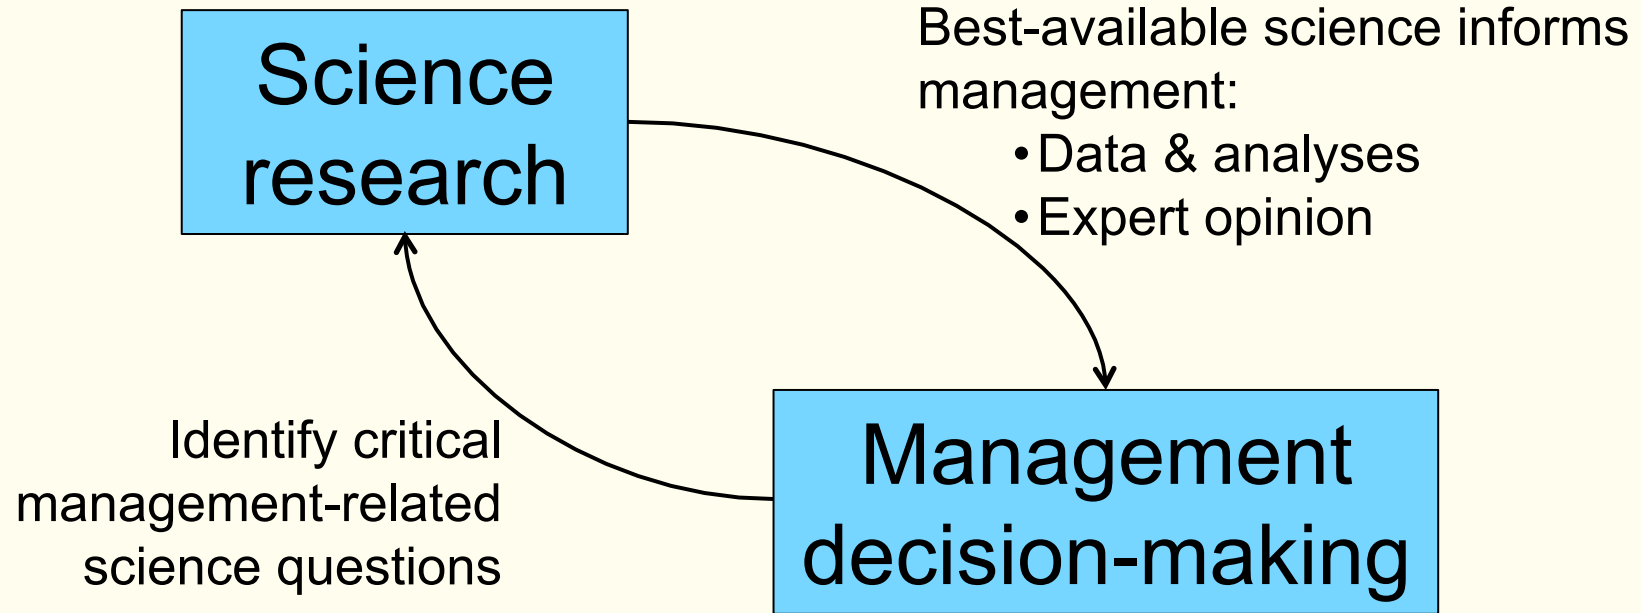

- 2. CONSERVATION ACTION PLANNING GUIDELINES FOR DEVELOPING STRATEGIES IN THE FACE OF CLIMATE CHANGE**

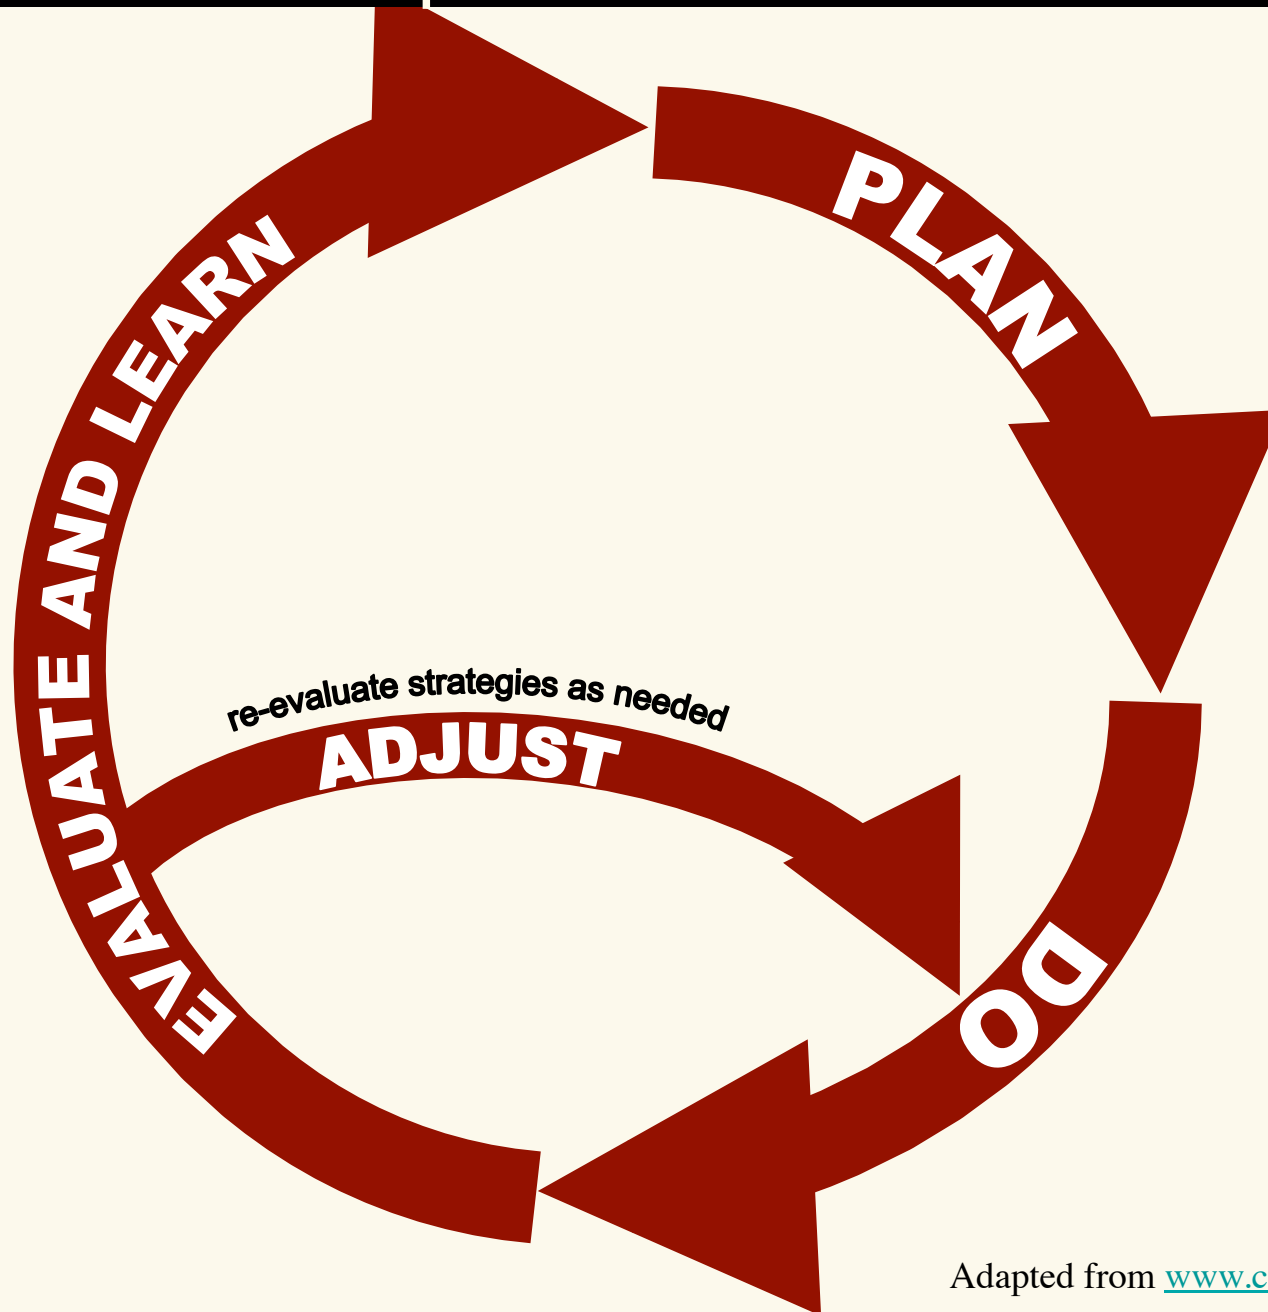

# Participatory: Integrating science & management

# Iterative: Incorporate new information and adjust

Adapted from [www.cmar.csiro.au/research/mse/](http://www.cmar.csiro.au/research/mse/)

# Climate Change Adaptation Framework

Select conservation feature  
&  
Define management objectives

## FEATURE:

*Species*  
*Ecological process*  
*Ecosystem*

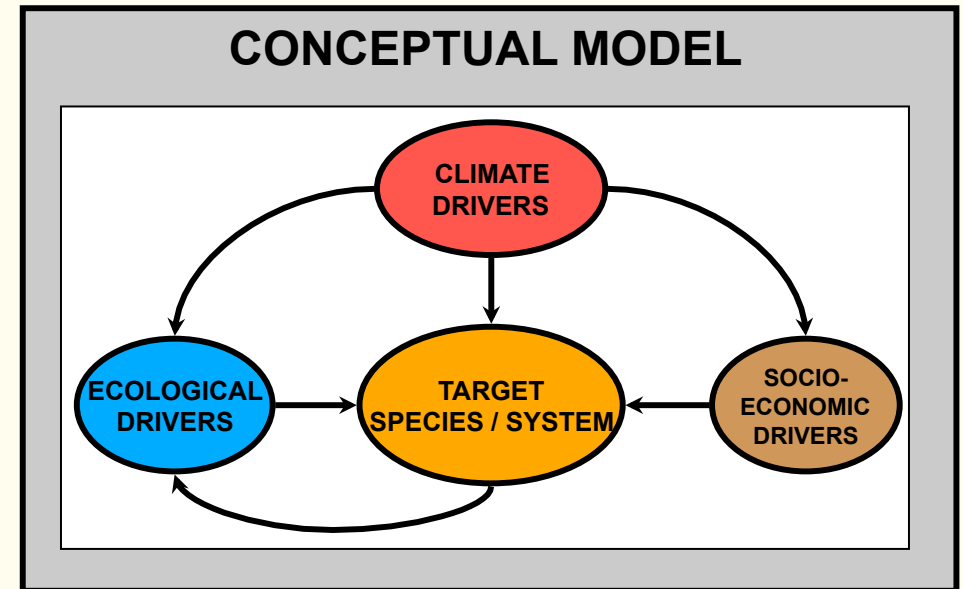

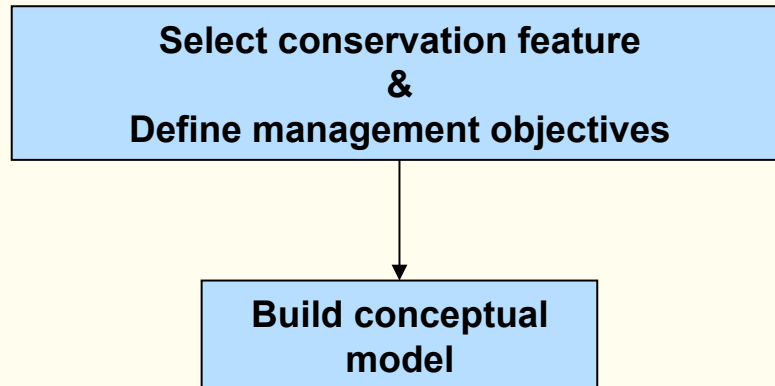

## OBJECTIVES:

*Current Objectives*

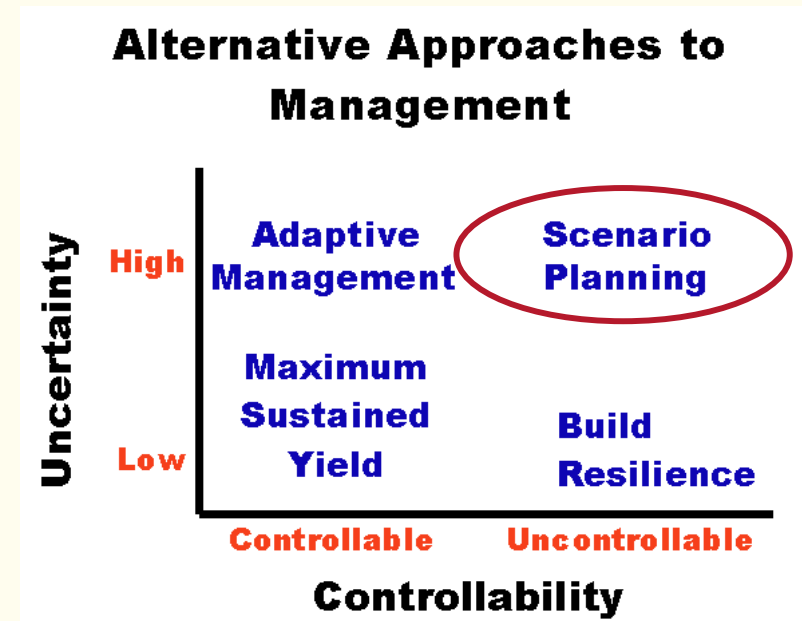

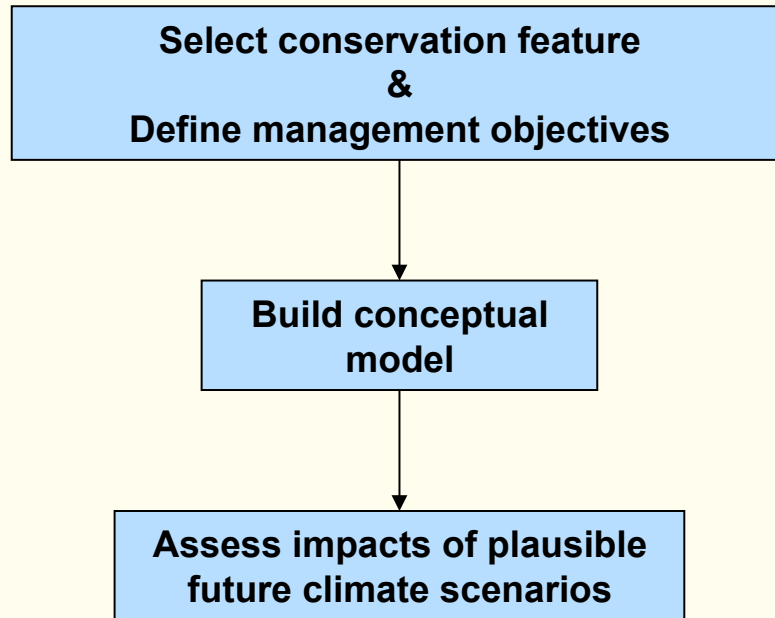

*or*

*Resistance*  
*Resilience*  
*Response*

# Climate Change Adaptation Framework

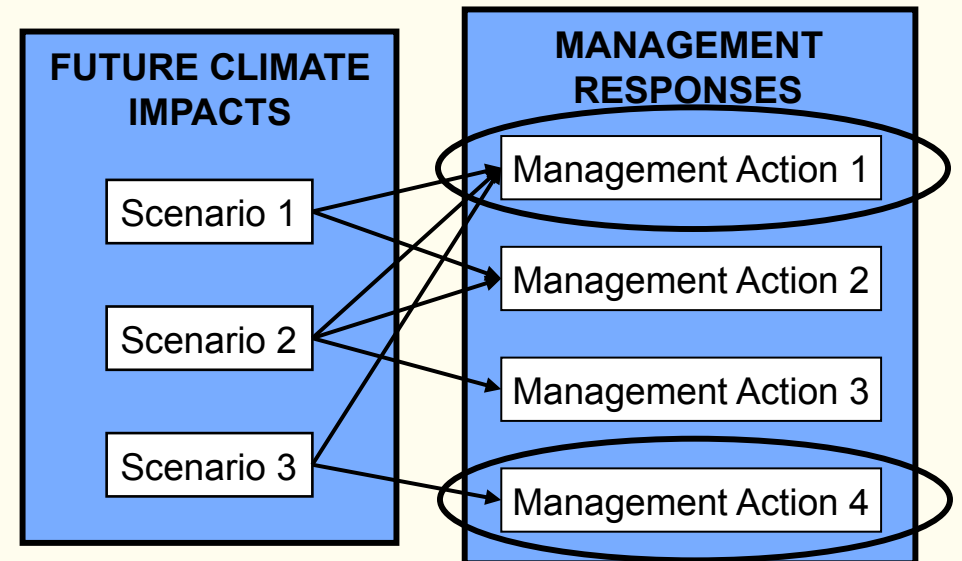

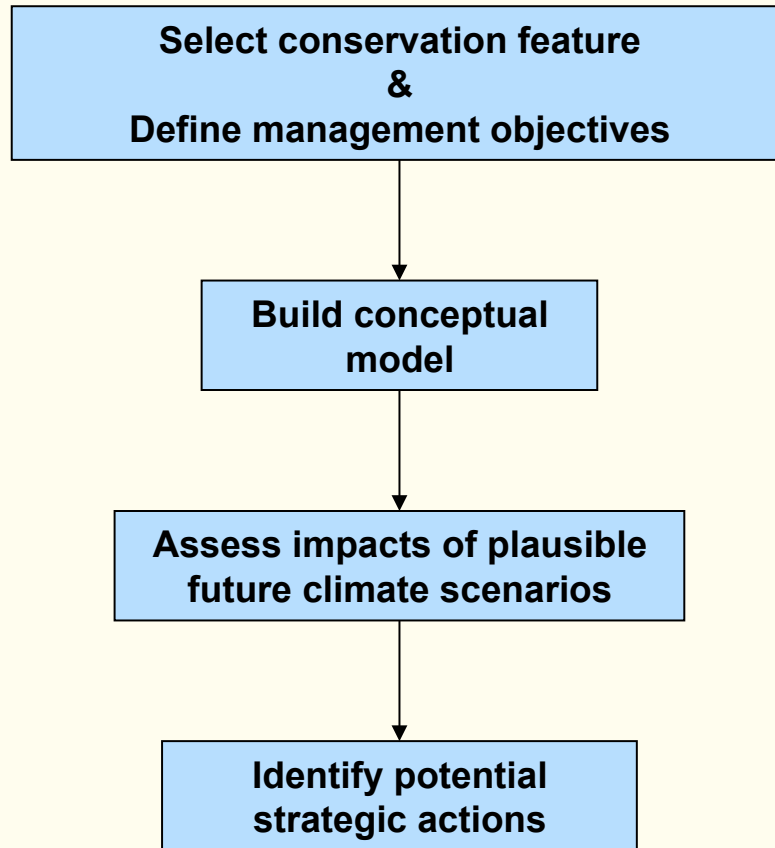

# Climate Change Adaptation Framework

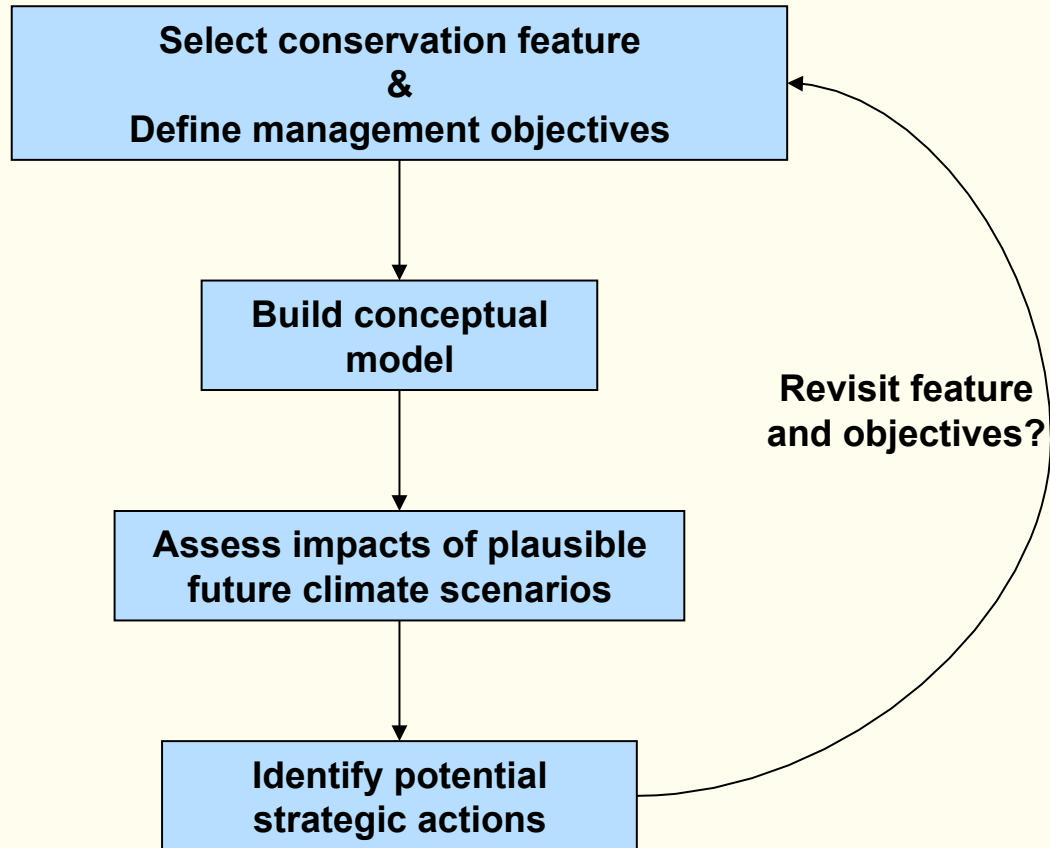

Peterson et al. 2004

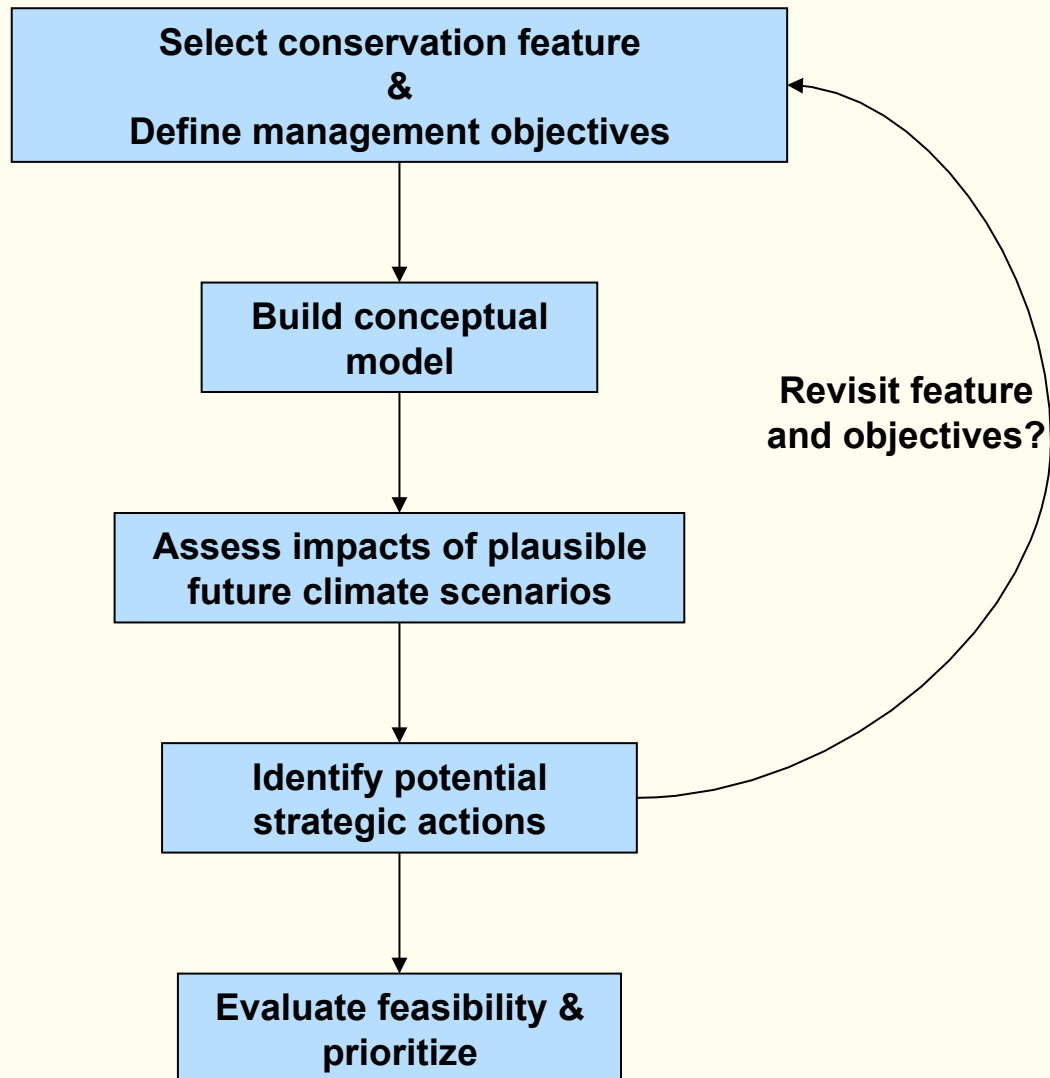

# Climate Change Adaptation Framework

# Climate Change Adaptation Framework

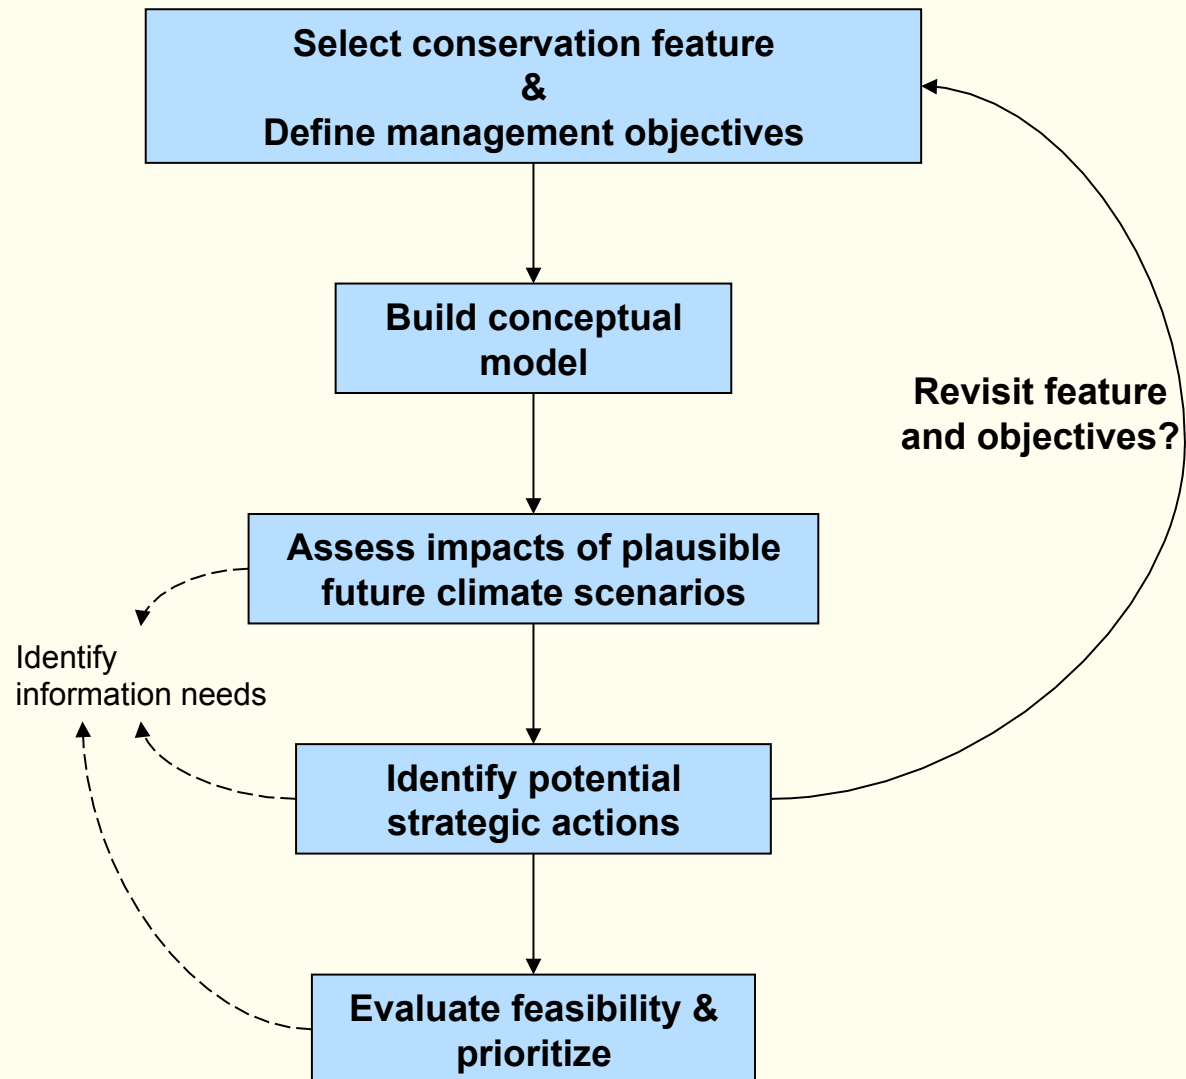

# Climate Change Adaptation Framework

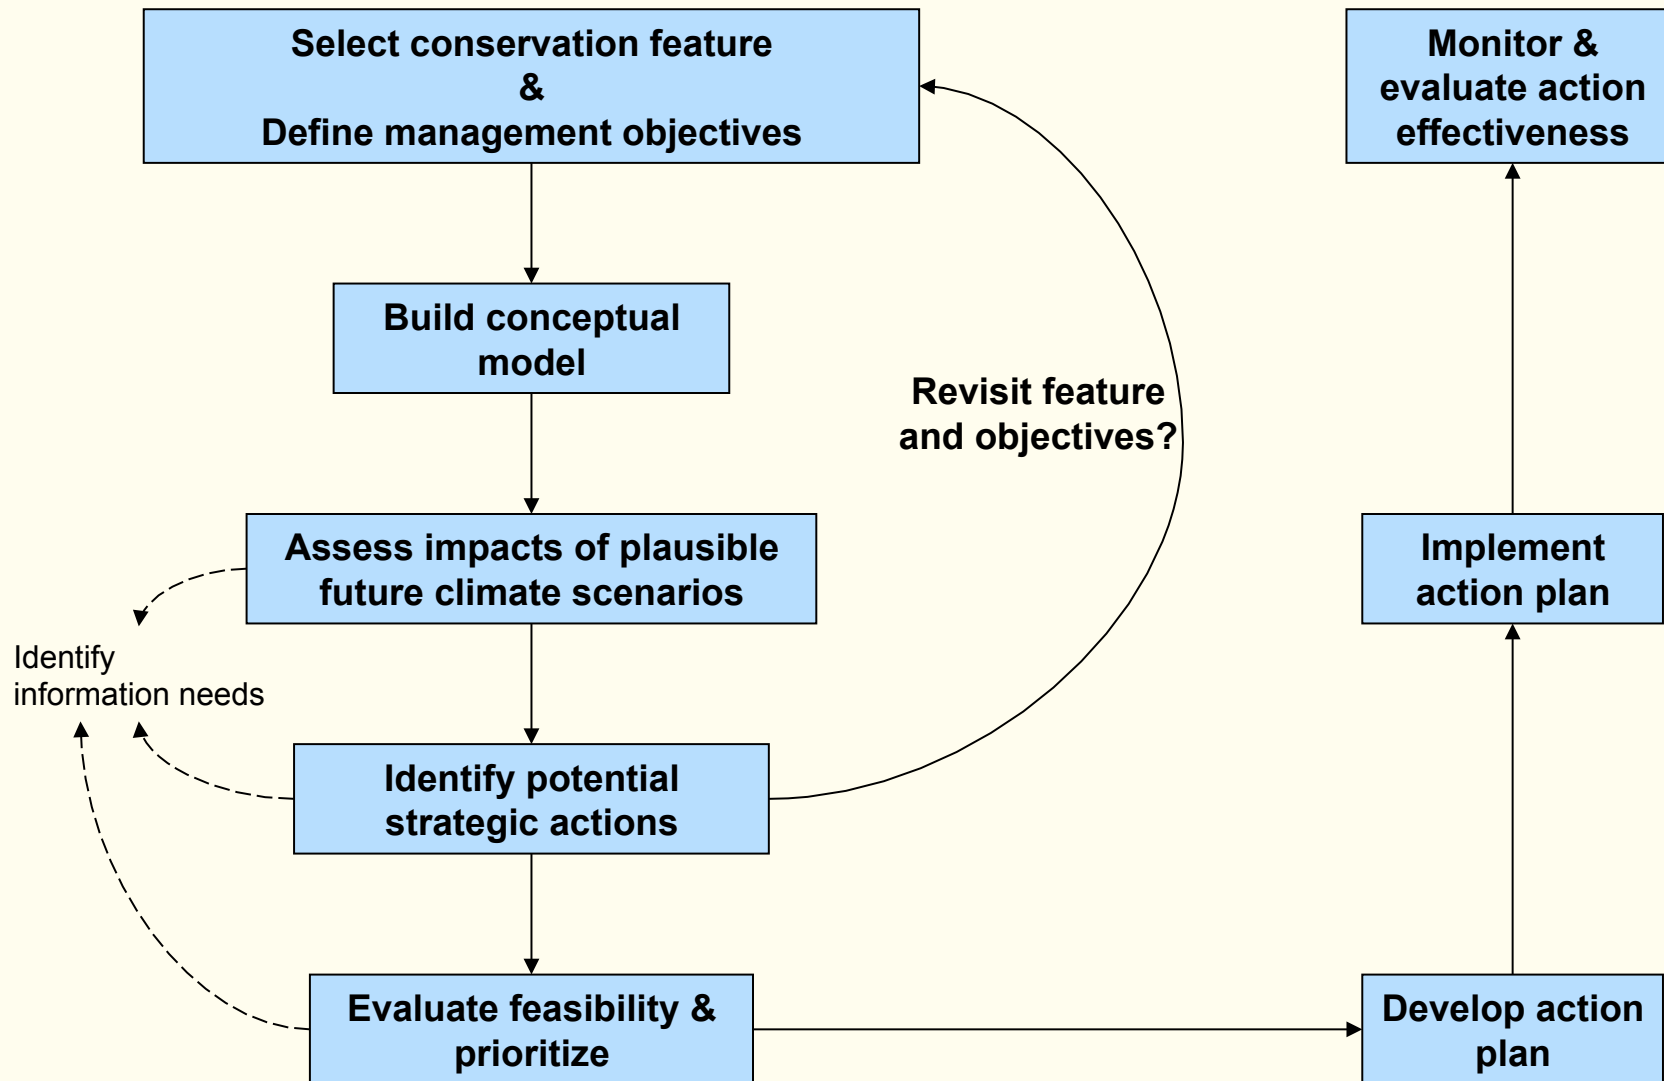

## EVALUATION FACTORS:

- How “robust” to climate change uncertainty
- Feasibility (economic, regulatory, social)
- Unintended consequences

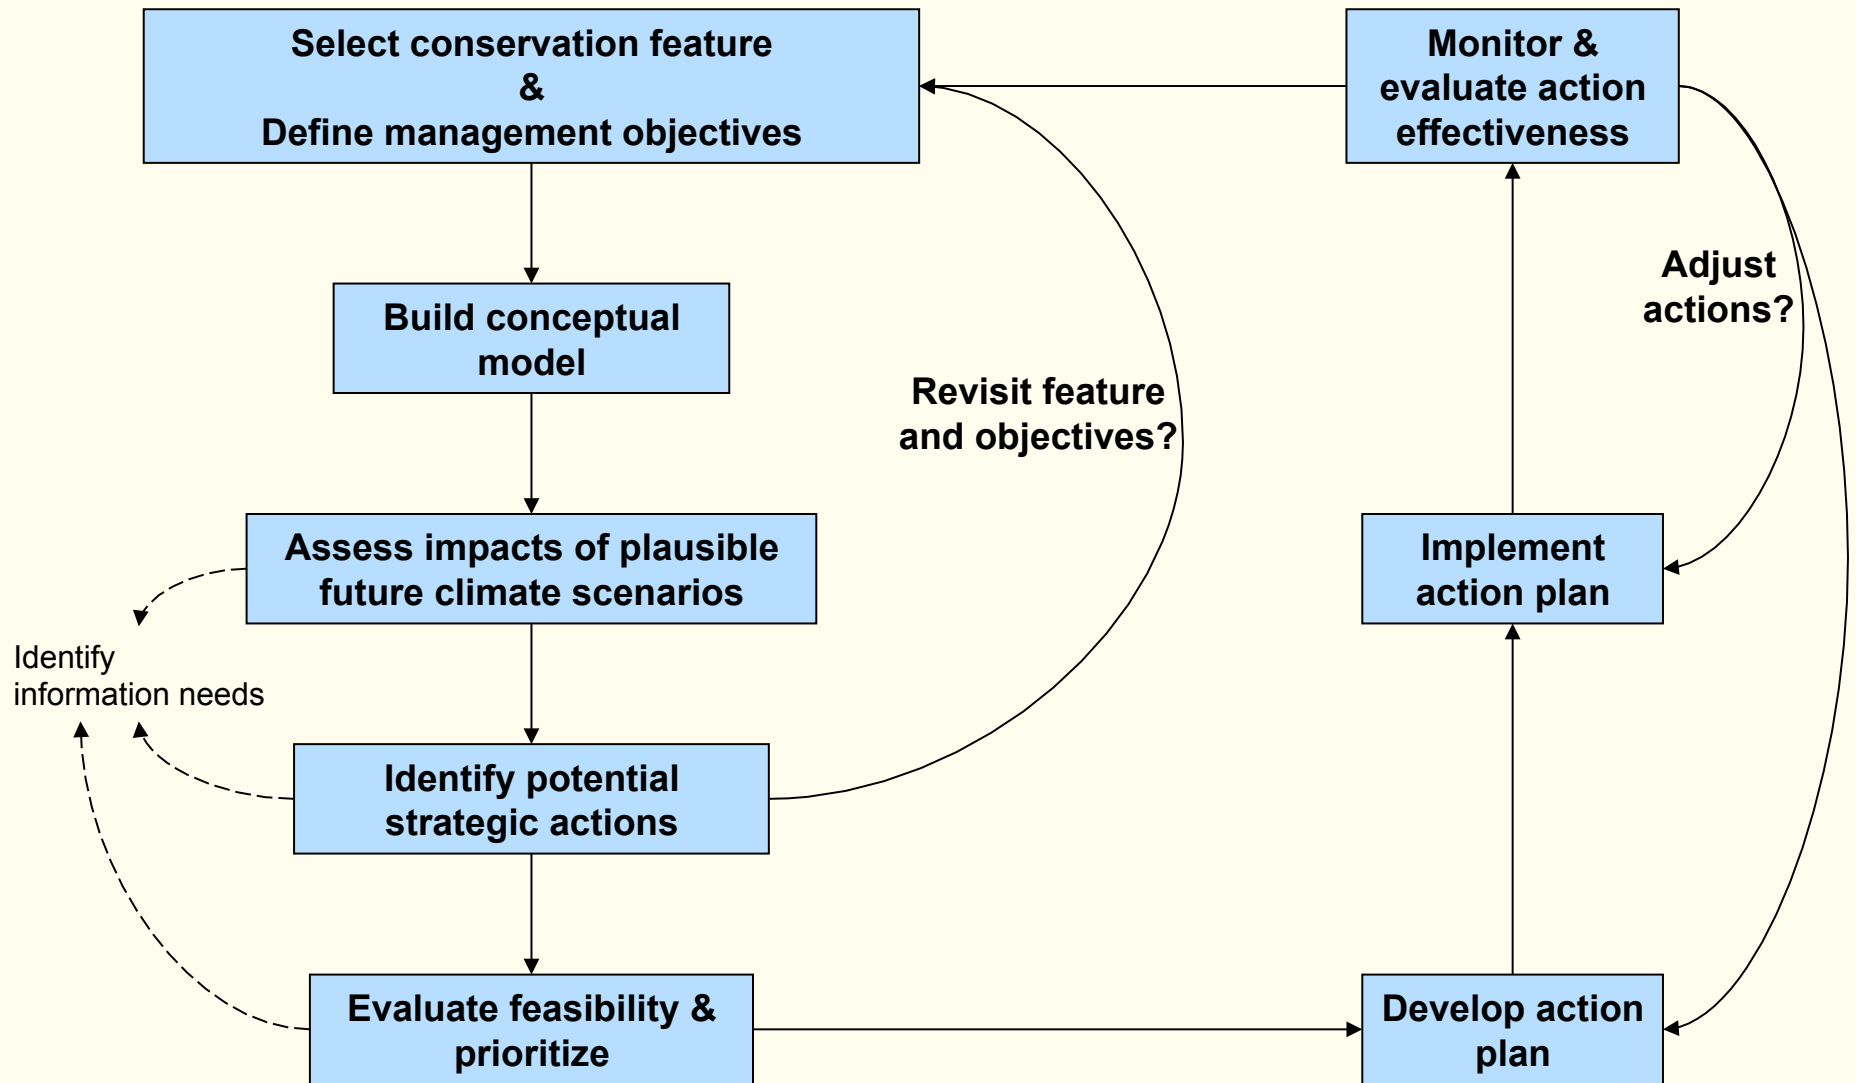

# Climate Change Adaptation Framework

# Climate Change Adaptation Framework

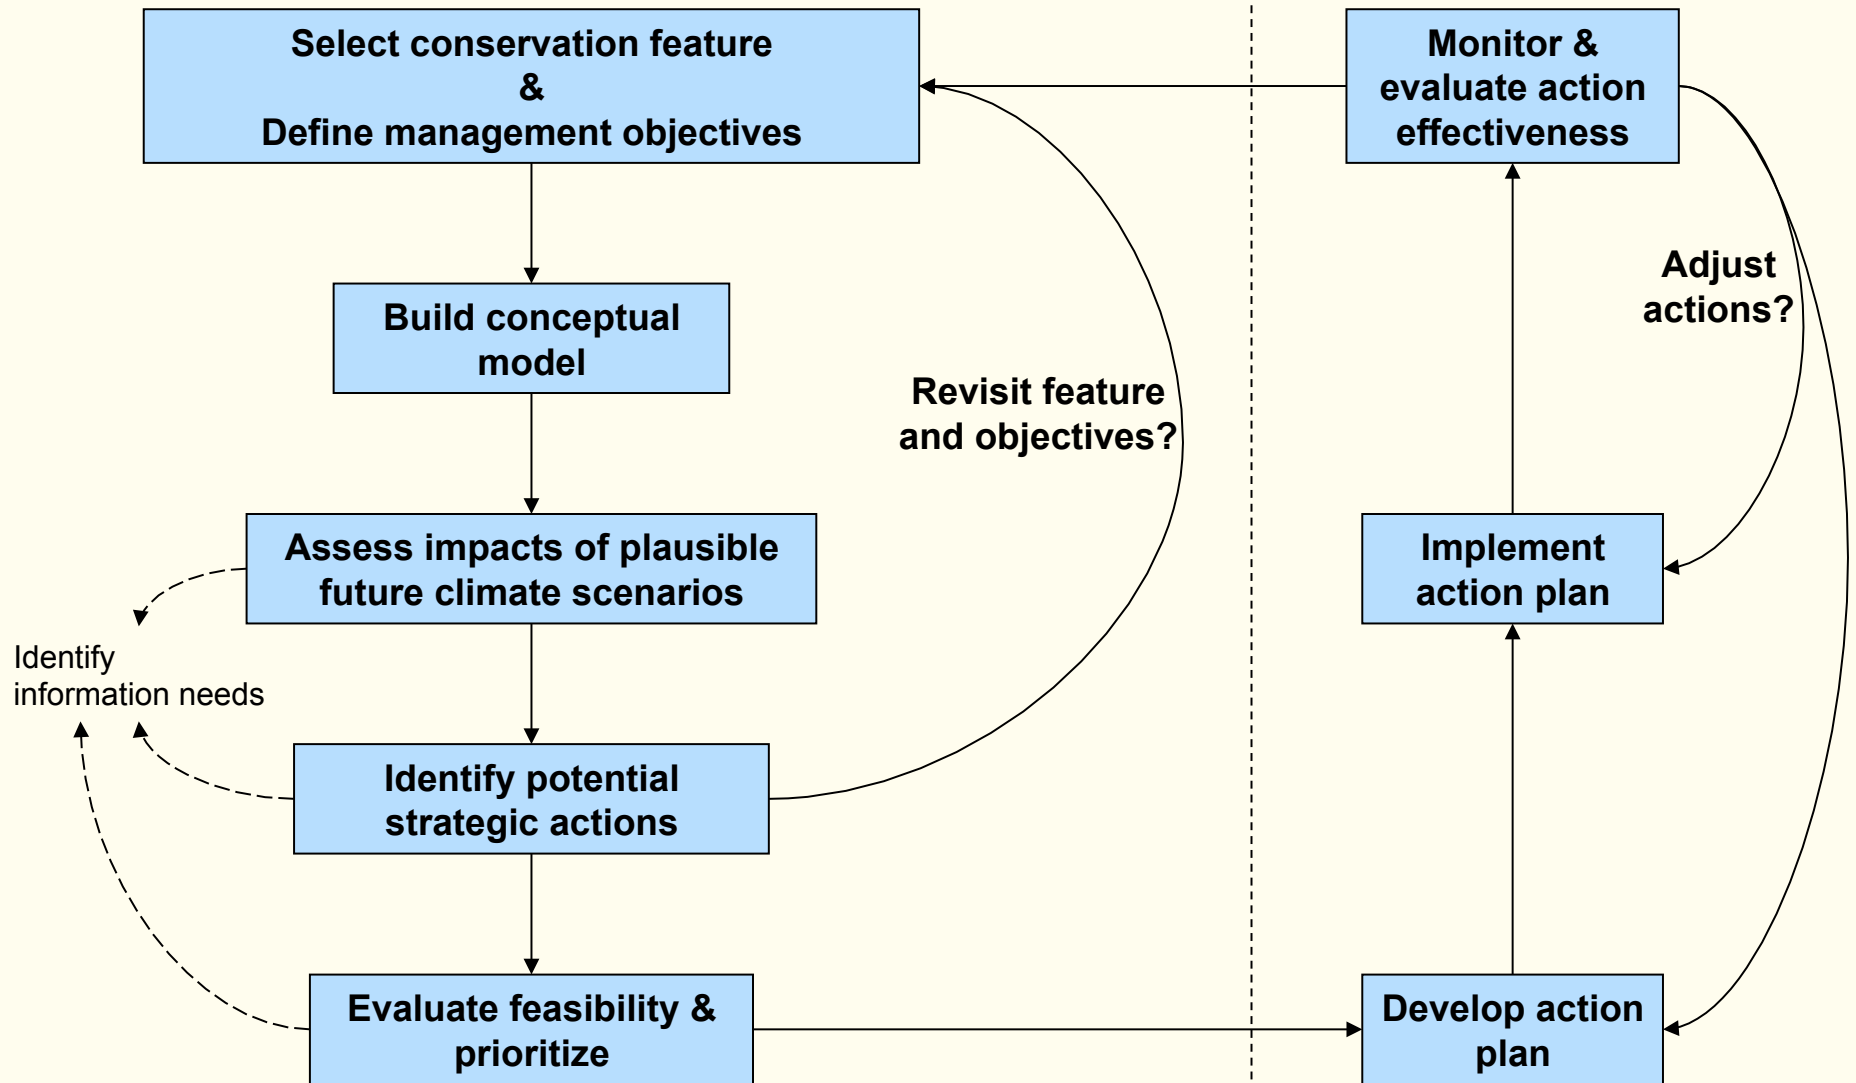

# Climate Change Adaptation Framework

# Climate Change Adaptation Framework

## Planning phase

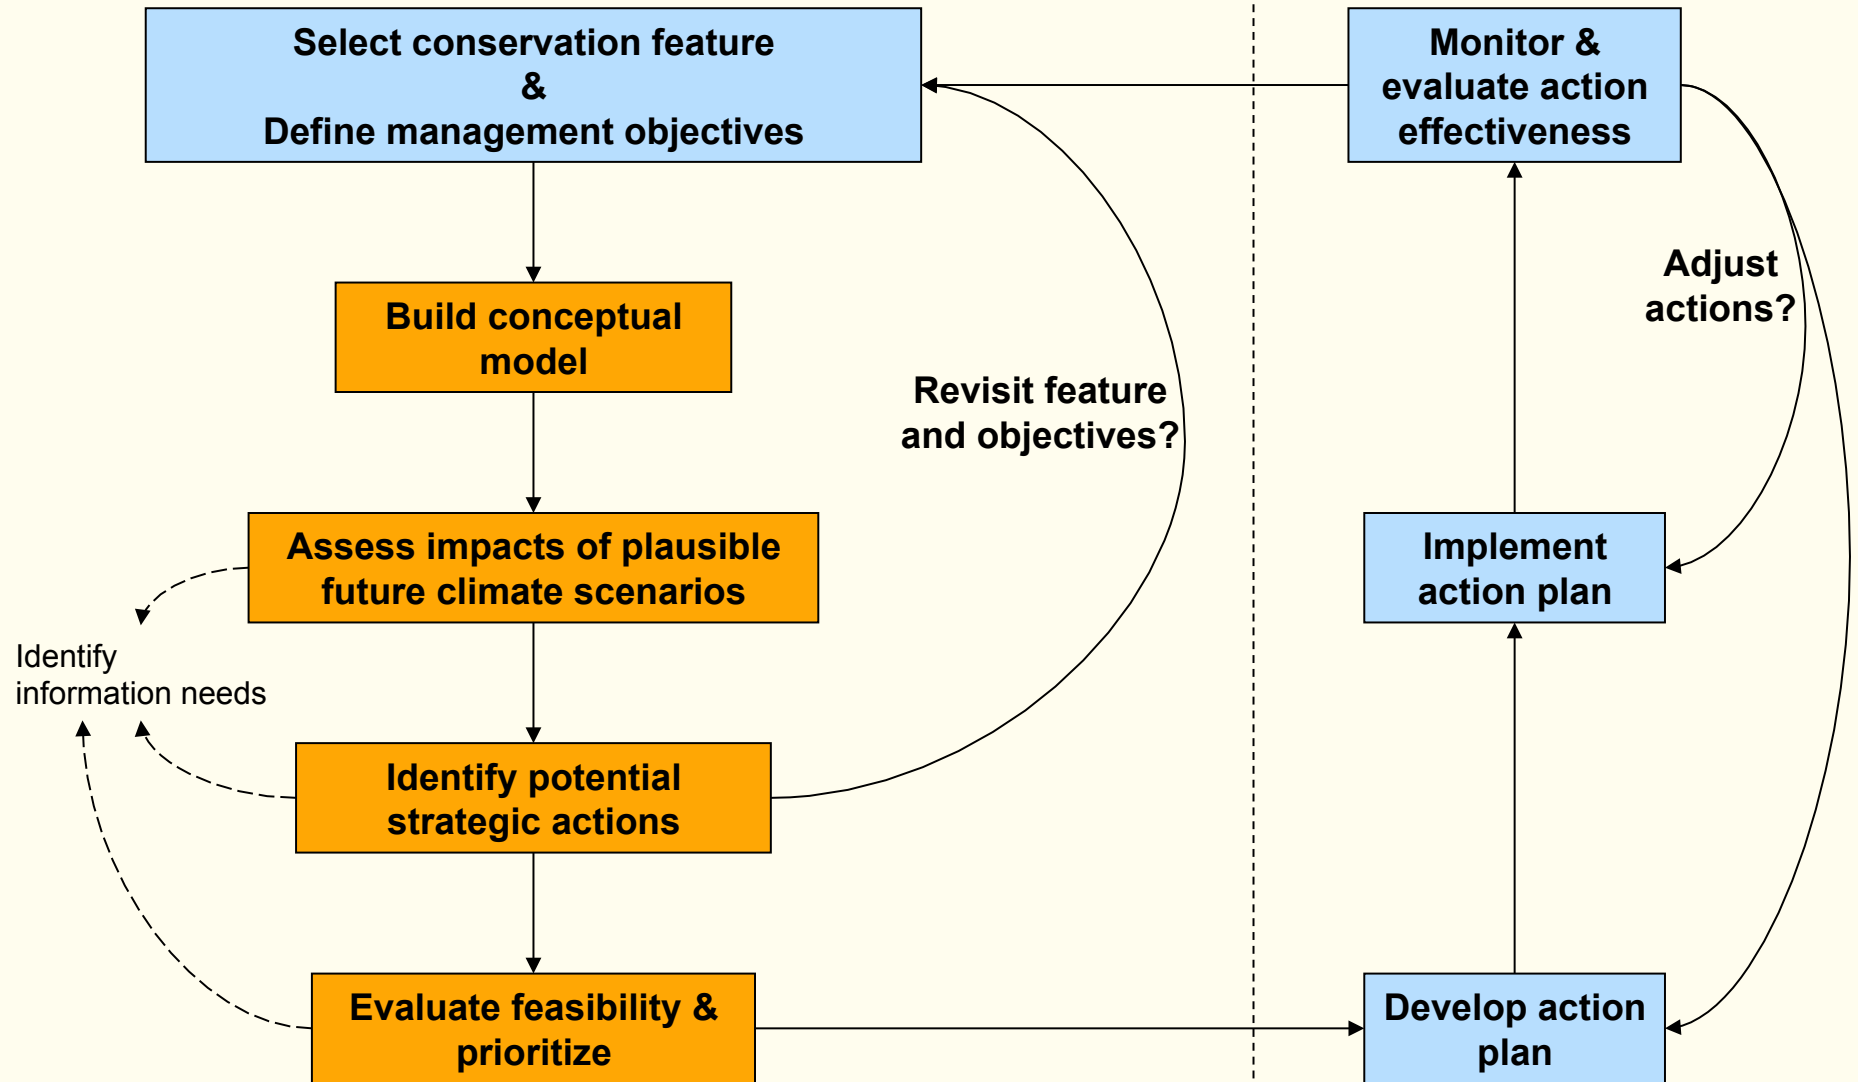

## Implementation phase

# Climate Change Adaptation Framework

## Planning phase

## Implementation phase

 = steps we will walk through during workshop

# A real world example

## Greater Yellowstone Ecosystem

# Select feature and define management objective

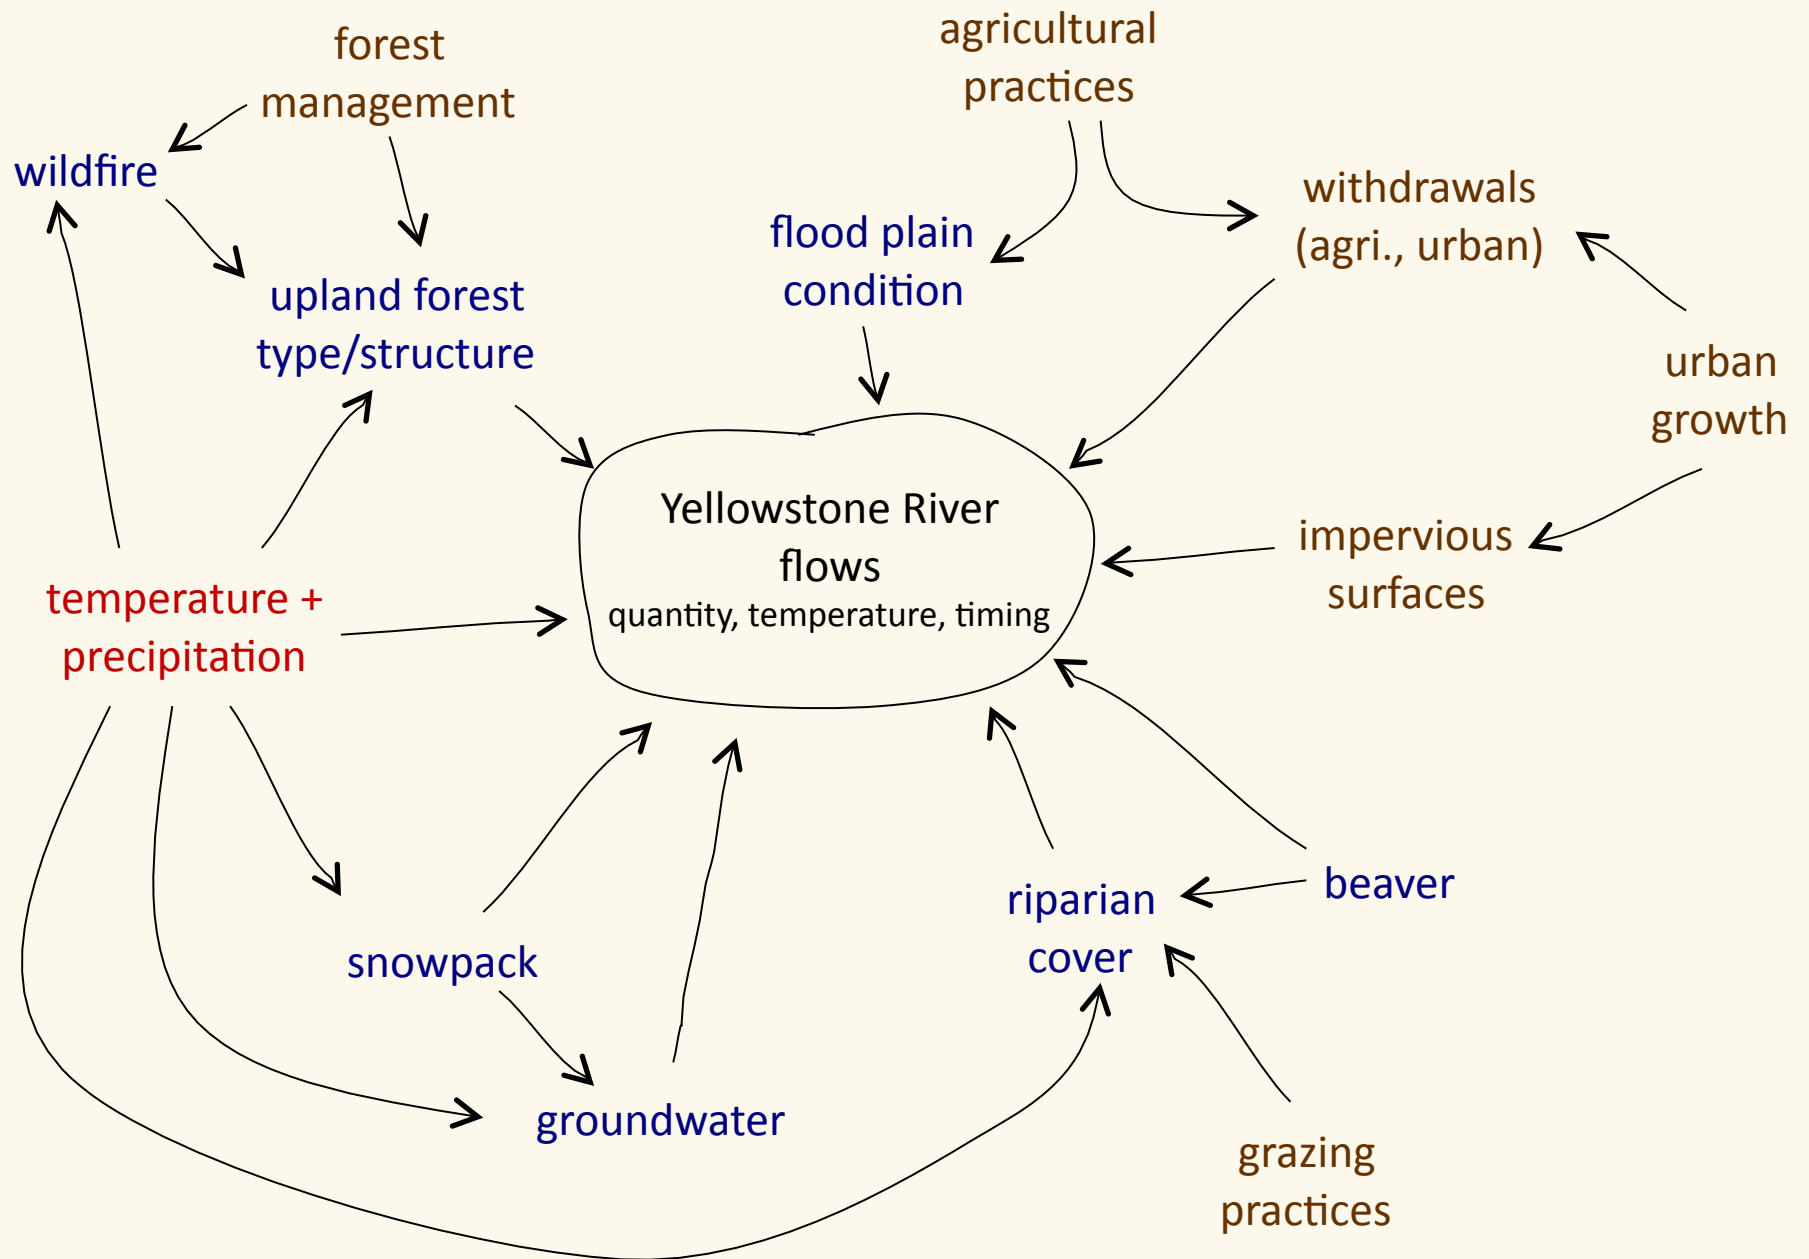

**Yellowstone River flows  
(ecological process)**

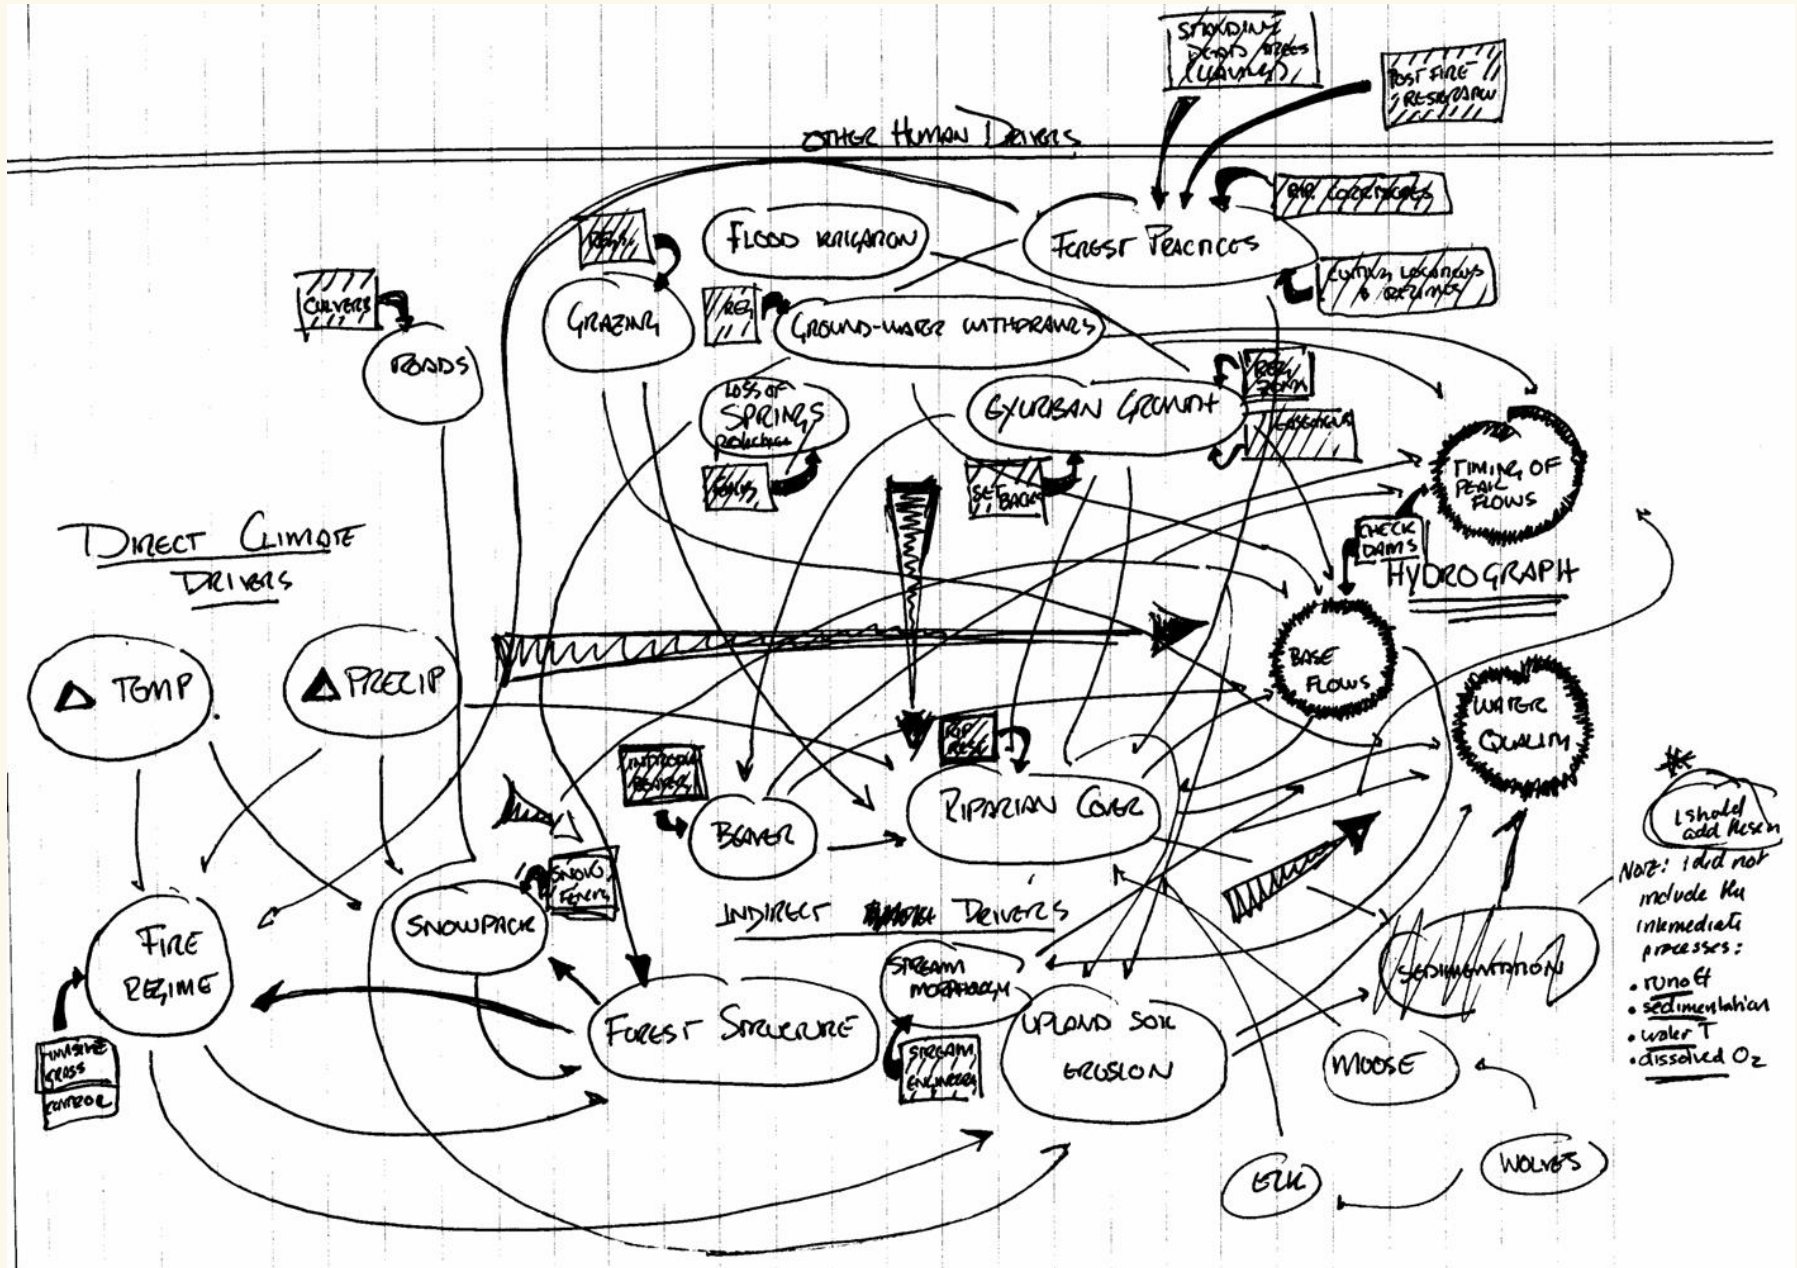

**To maintain  
Yellowstone  
cutthroat trout**

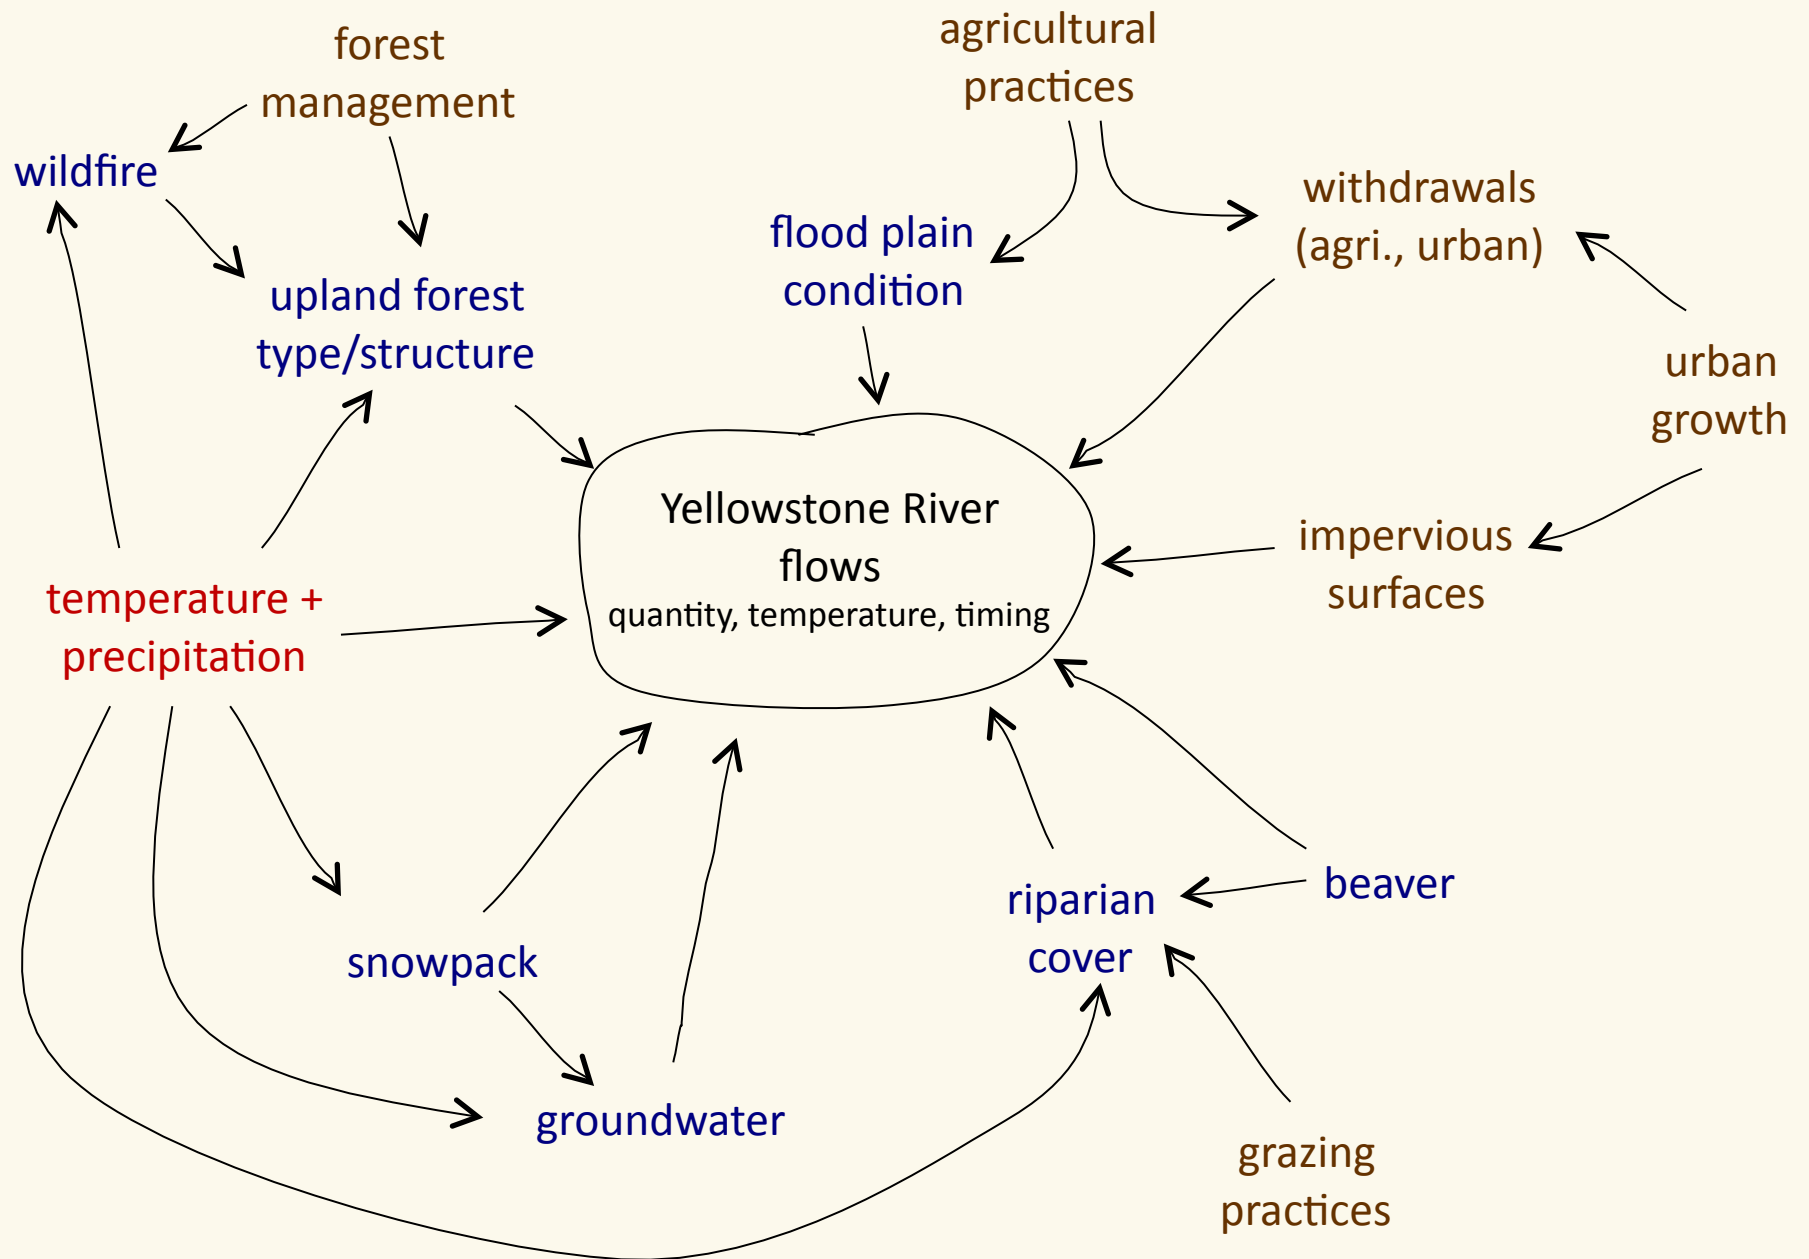

# Build conceptual model

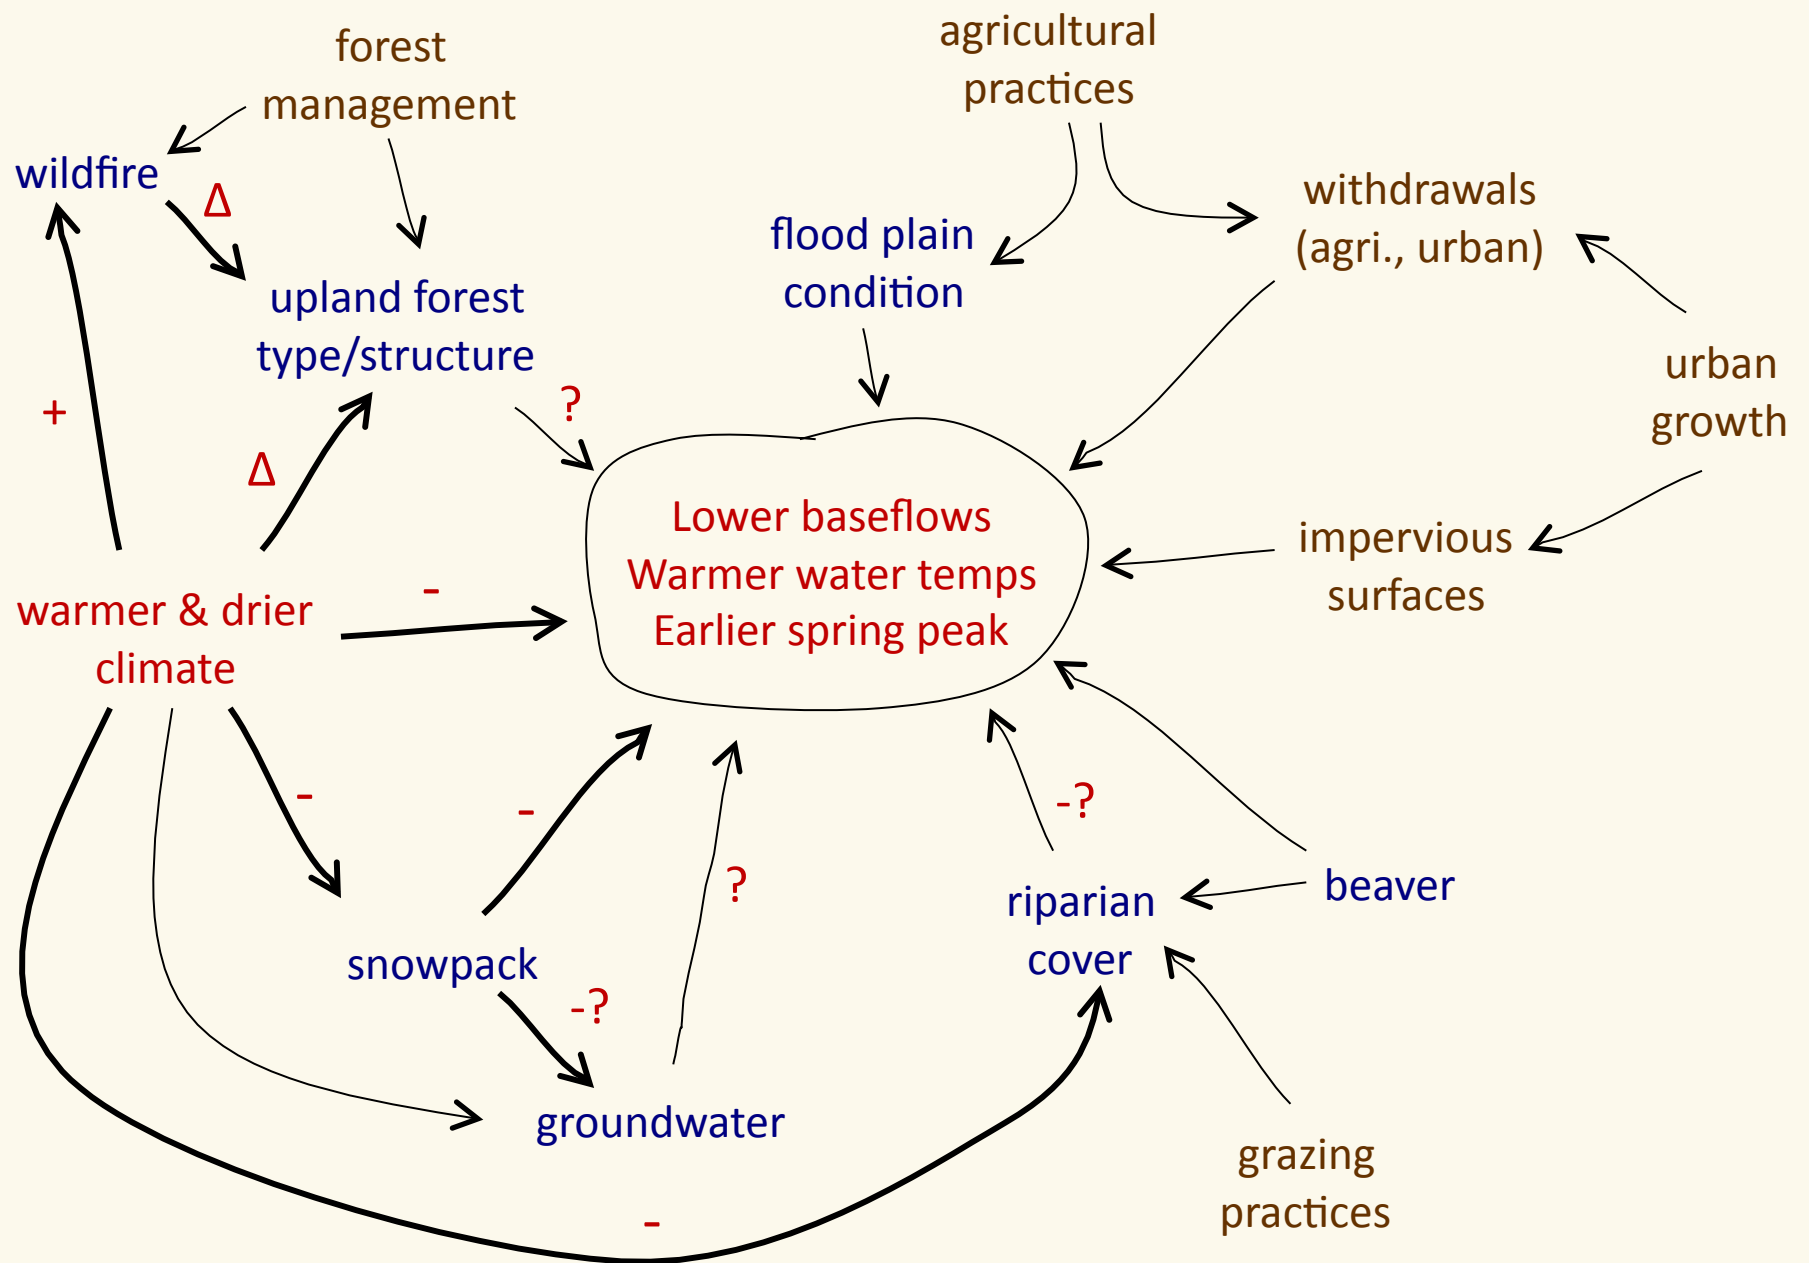

# Build conceptual model

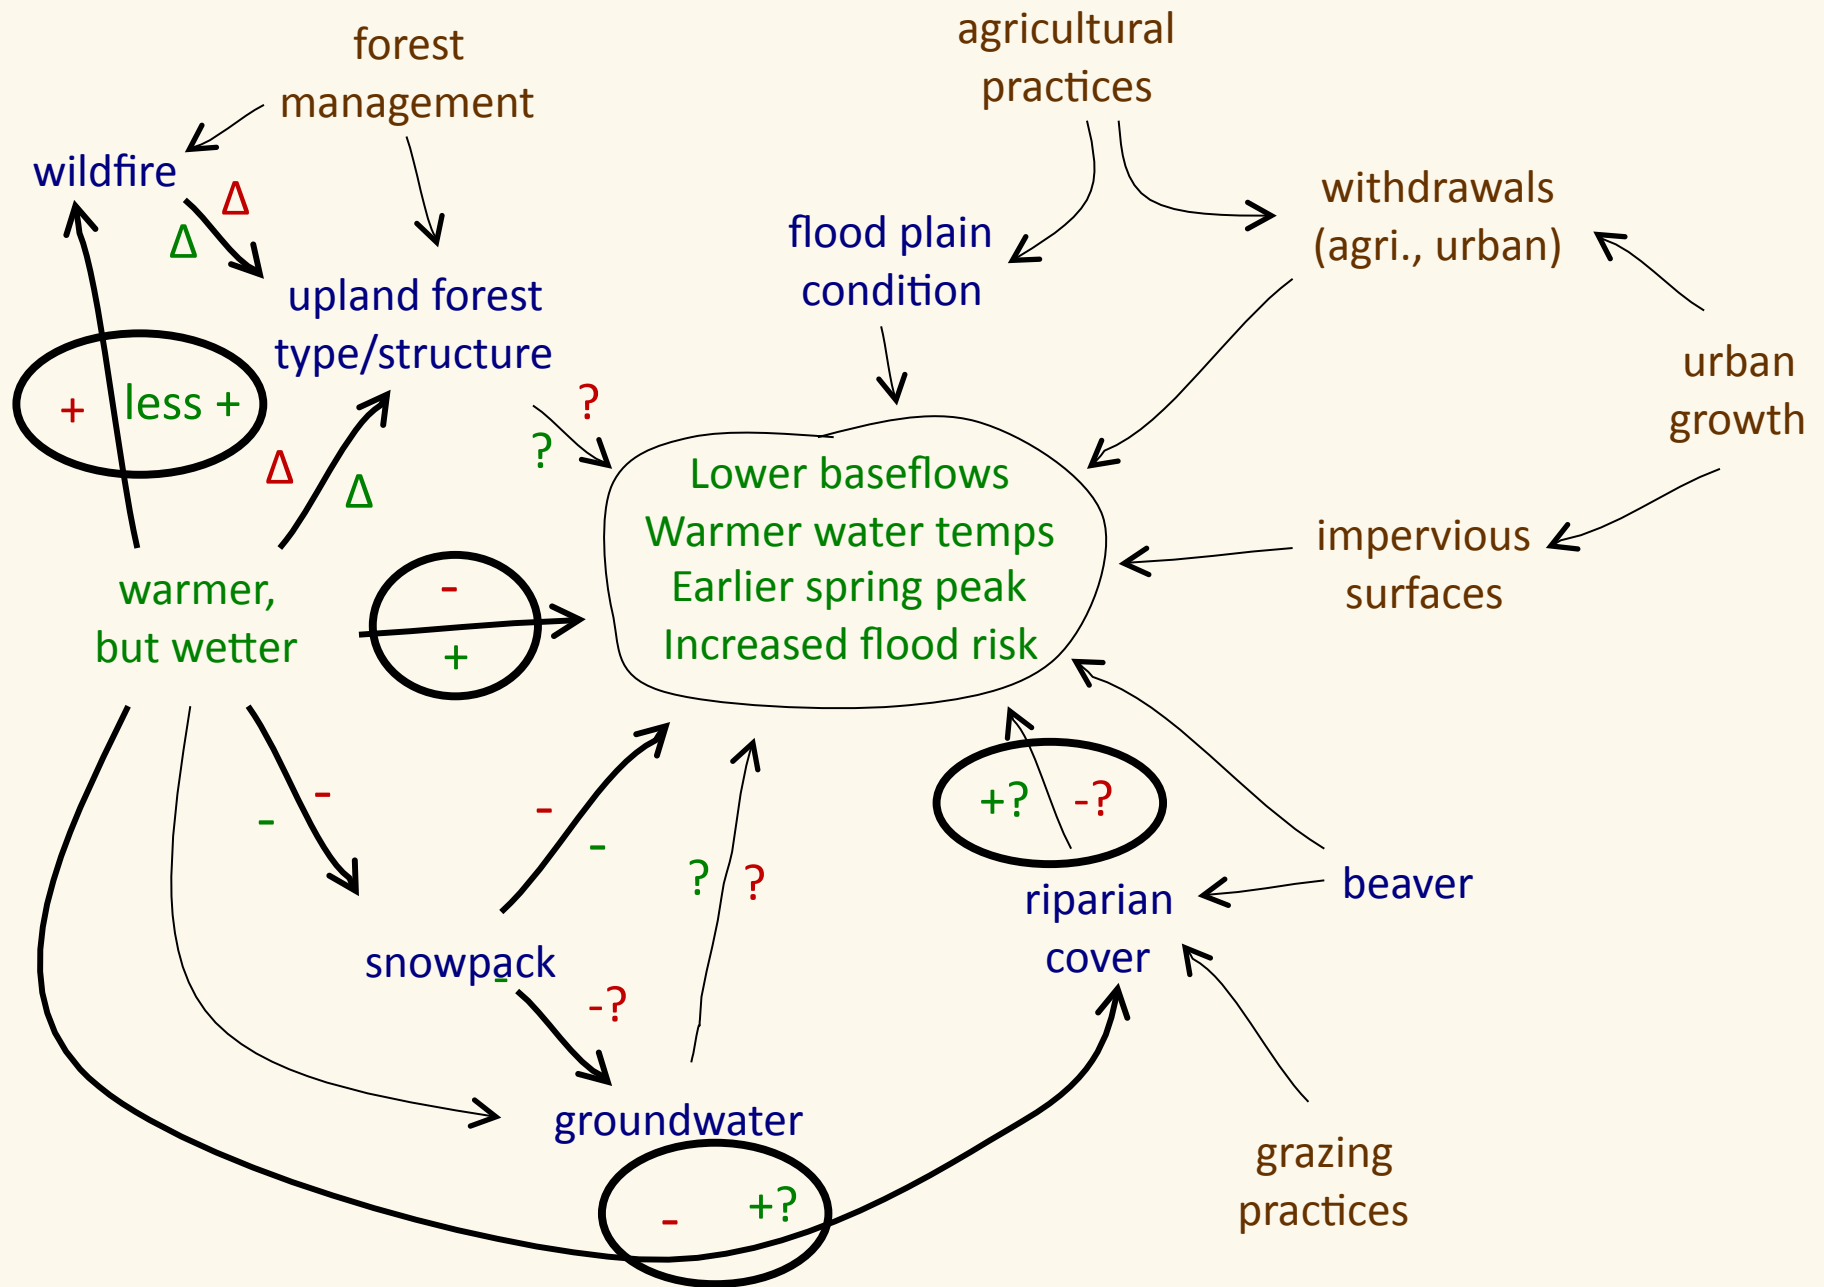

# Build conceptual model

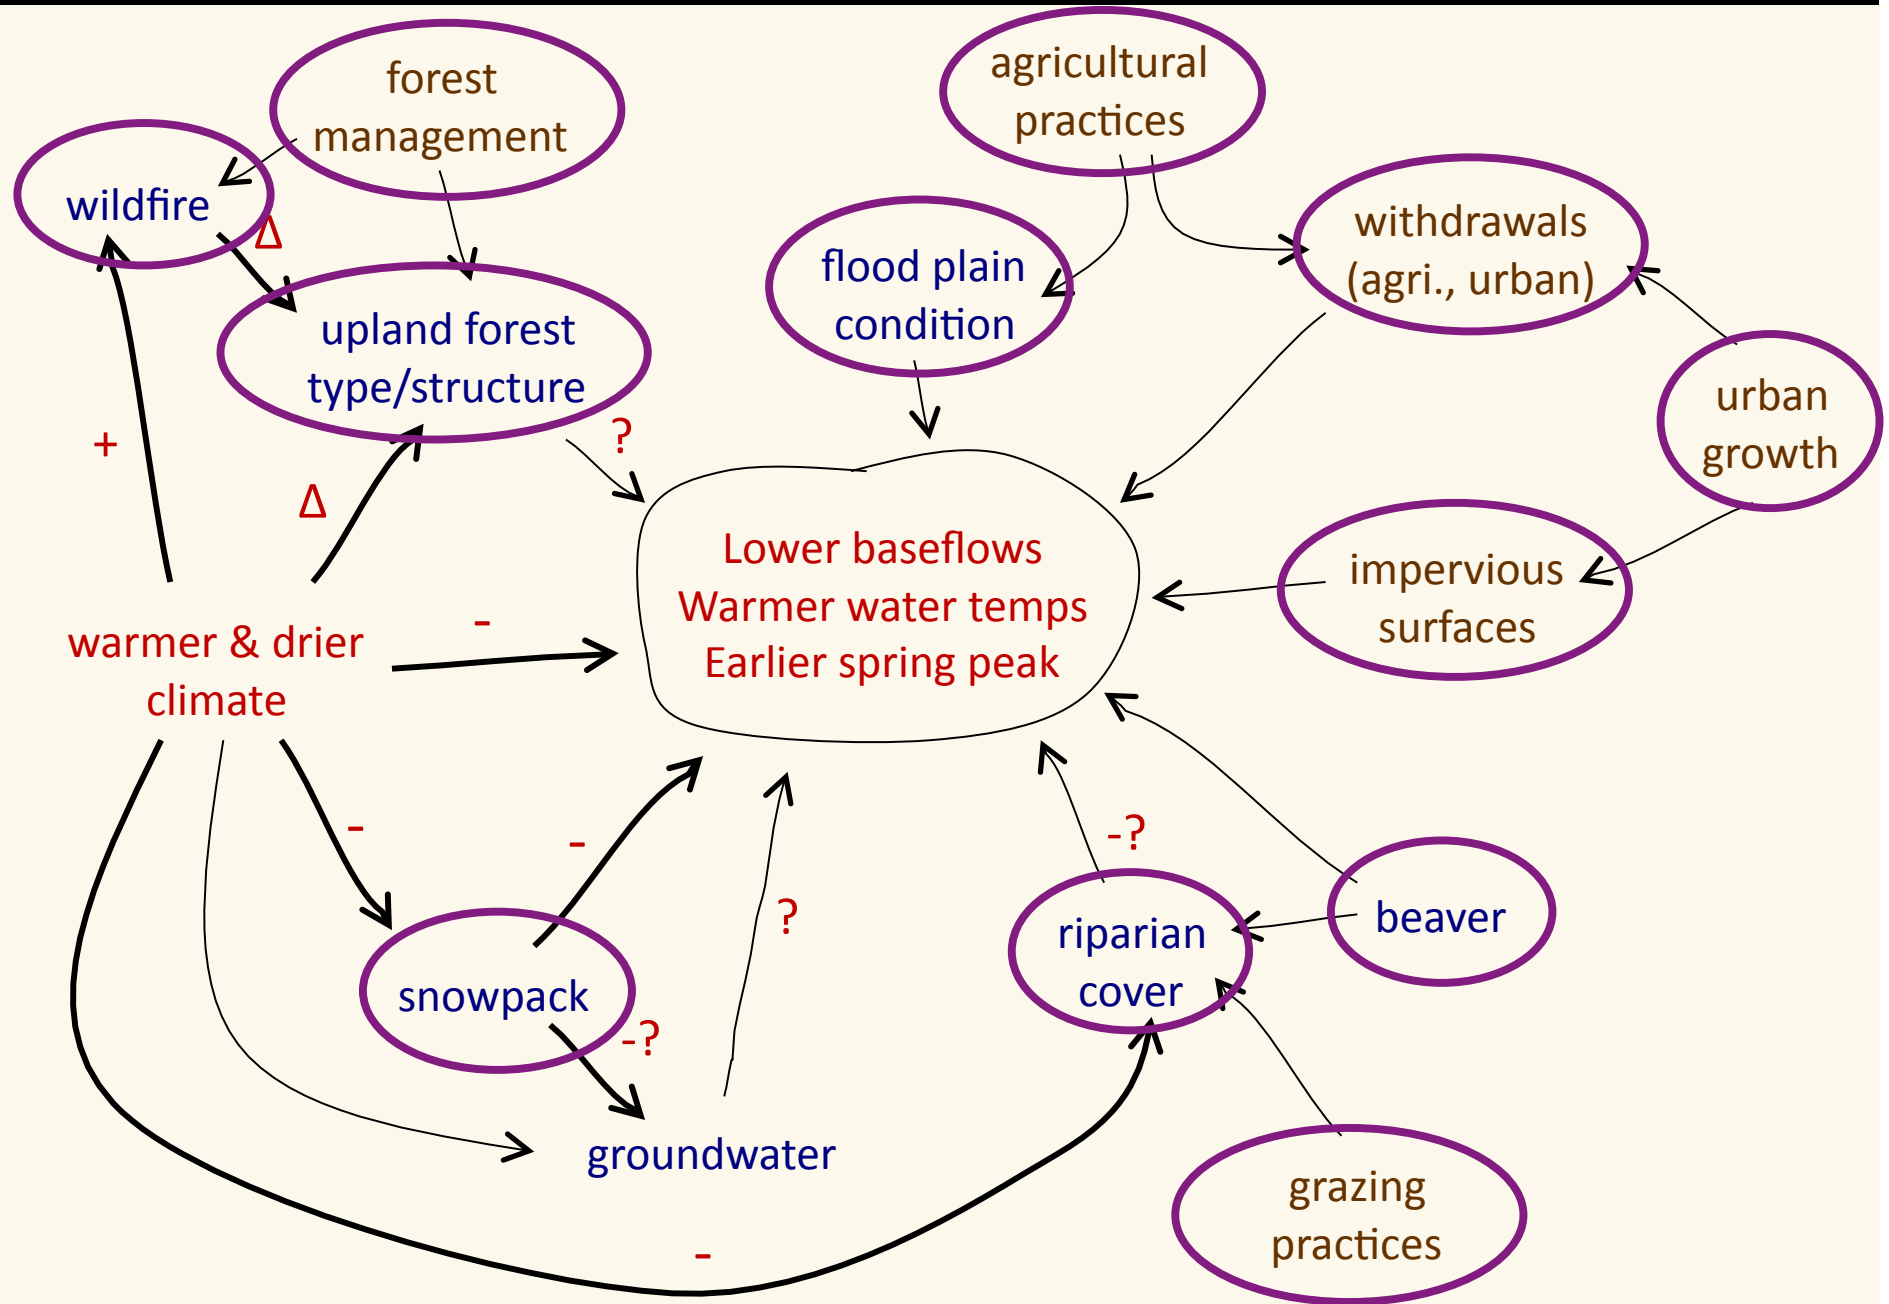

# Initial climate scenario: Warmer & drier

# Alternate climate scenario: Warmer & wetter

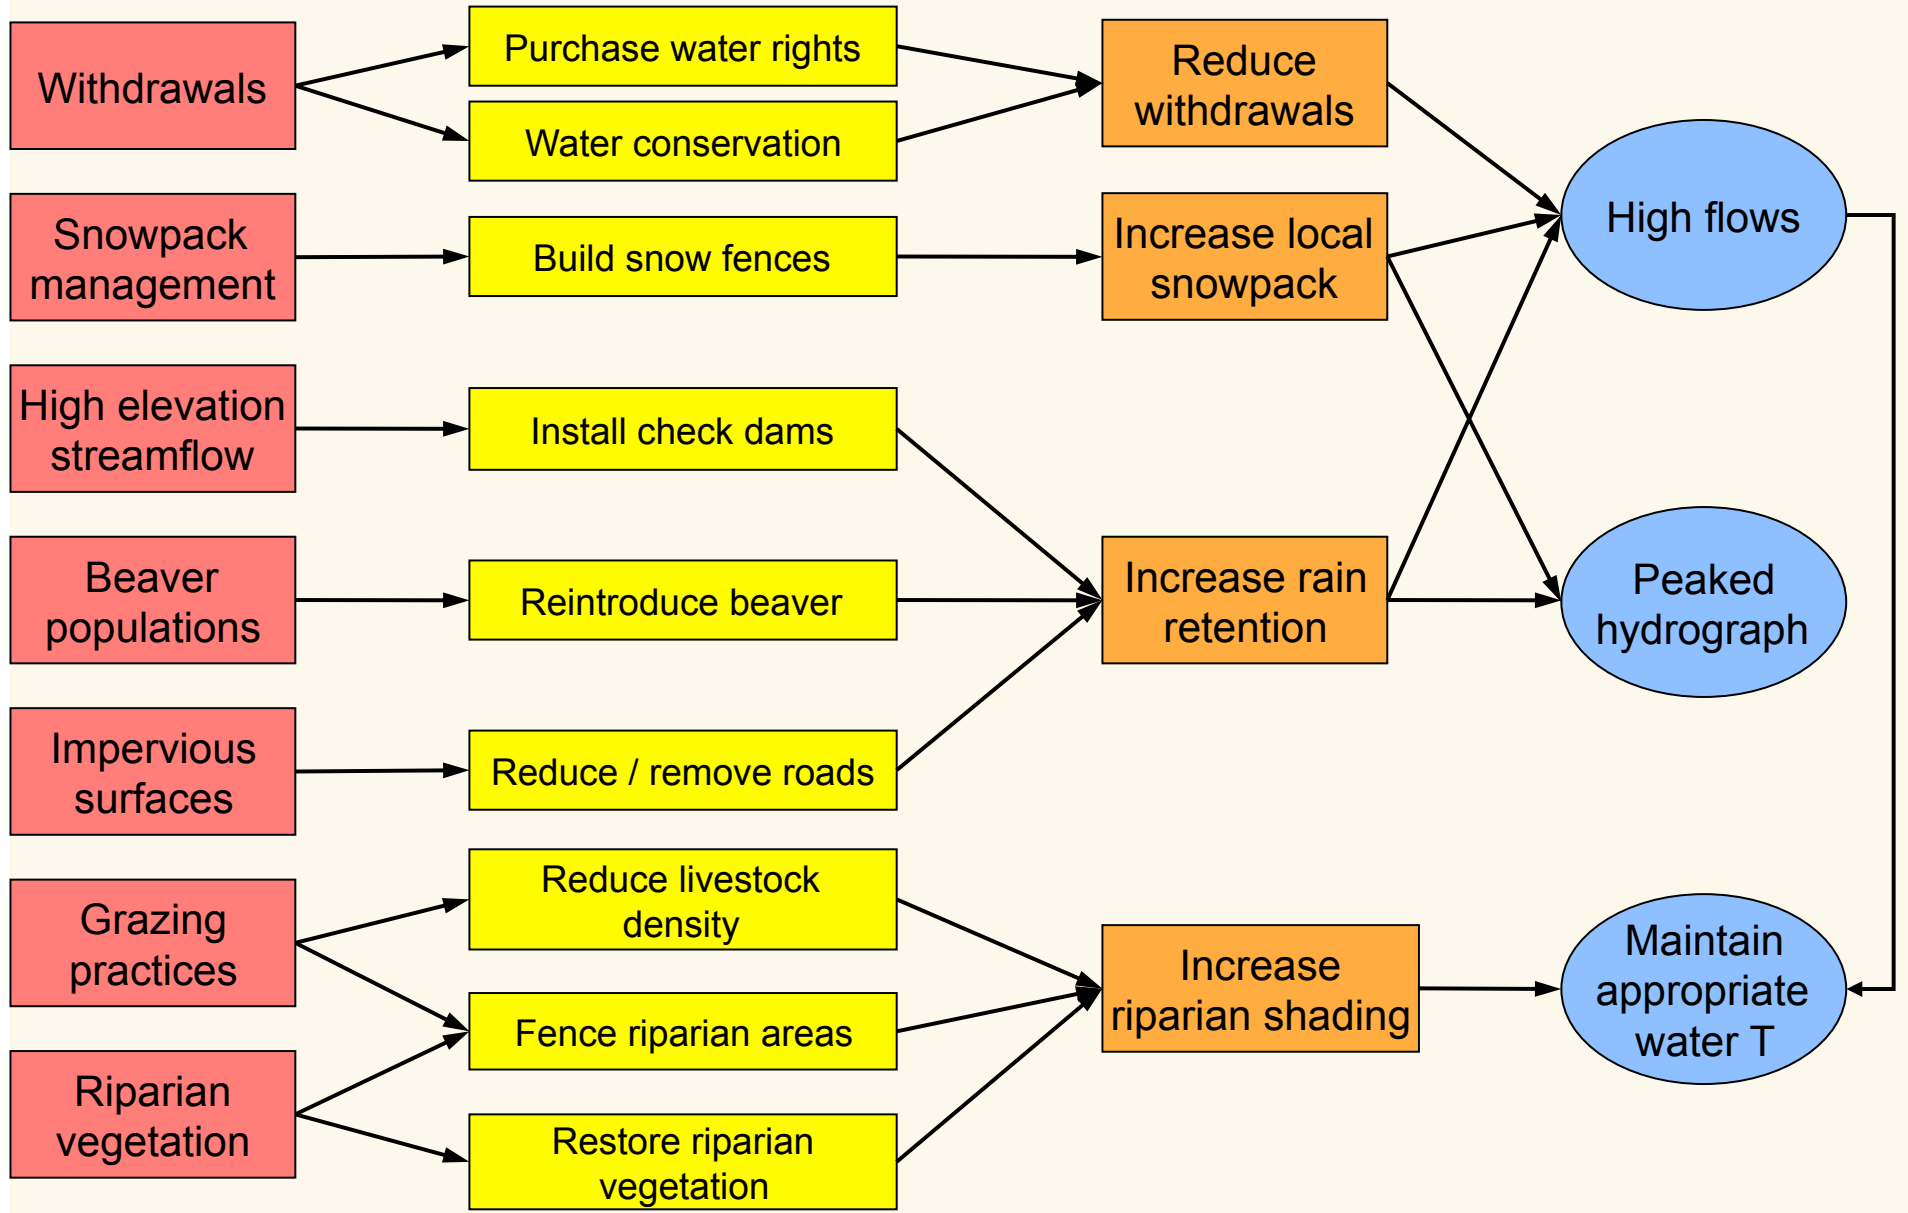

# Identify intervention points

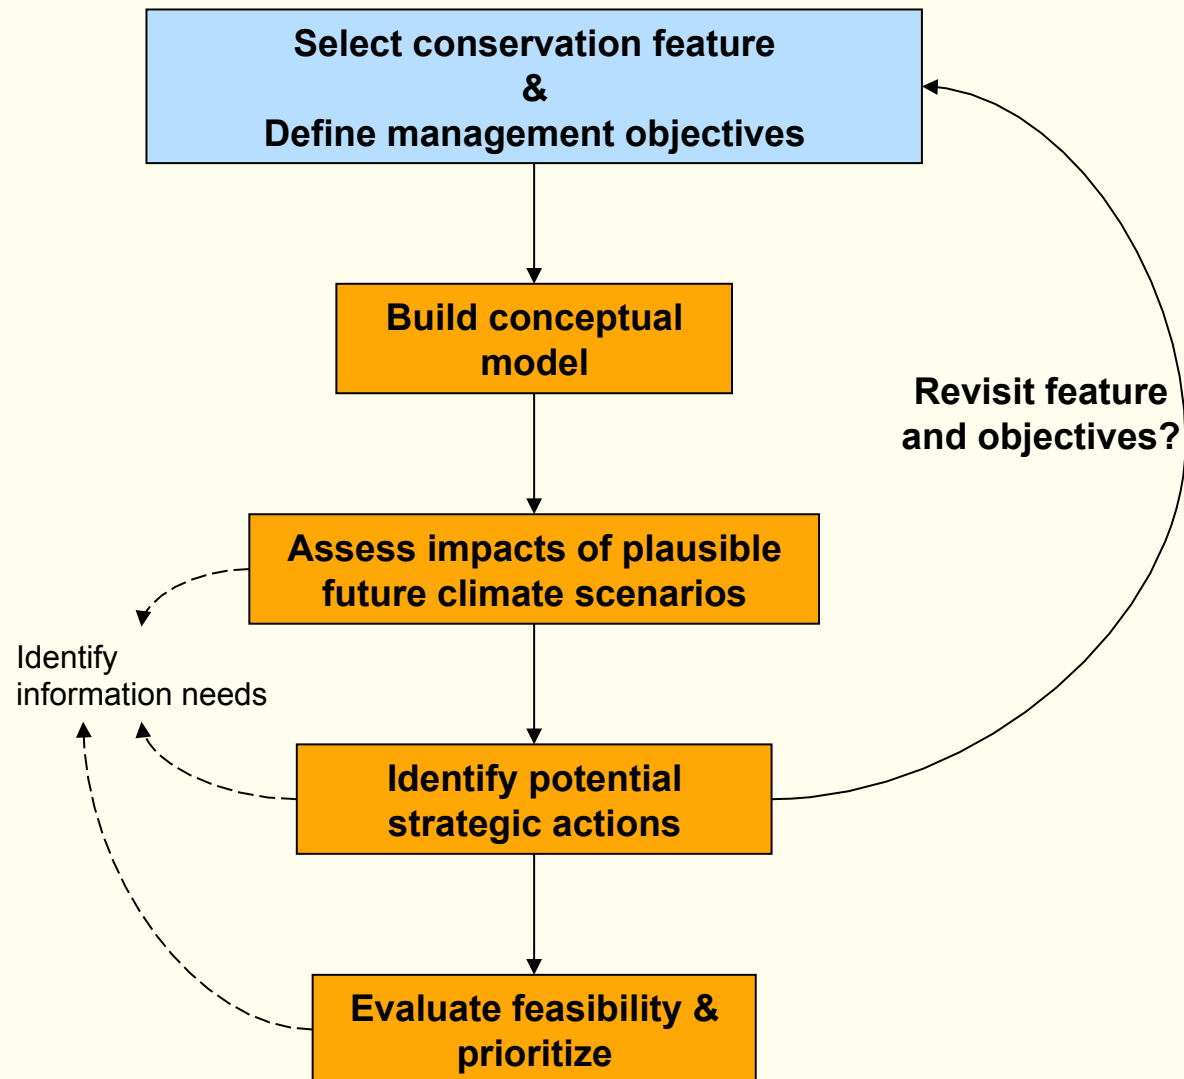

# Potential actions for initial climate scenario

Intervention Points → Potential Actions → Desired Responses

# Goal for breakout sessions

# Conservation features for this workshop

## 1. Ponderosa Pine – Fire

## 2. Ponderosa Pine - Water

## 3. Mexican Spotted Owl

# Questions?

B. Karesh, WCS
