# Adaptation Checklist for Climate Smart Projects: A Tool for the Michigan Department of Natural Resources

Climate change has implications for both the effectiveness and hazard risk potential of many projects and activities undertaken or reviewed by natural resource management agencies. Failing to evaluate the potential vulnerability of a project or action prior to implementation or approval can lead to missed opportunities to improve design, optimize siting or otherwise reduce risk. While this tool is most easily used in evaluating a place-based project, it can be used to assess the climate savviness of many types of actions as well as policies.

## How can I use the Checklist?

**This tool is designed to help you determine if, given climate change, your project will continue to deliver intended benefits.**

The Checklist supports your ability to:

- Explicitly evaluate the implications of future conditions on project function, longevity and impact
- Build climate consideration directly into funding, permitting and planning phases
- Reduce liabilities or avoid actions that will be ineffective under future conditions

### **STEP 1: Climate Quick Check**

Identify which aspects of climate change will be relevant to the project over its lifetime by considering a range of indicators.

### **STEP 2: Evaluation of Climate Impact on a Project**

Explore how those relevant aspects of climate change may affect the project by answering specific questions and considering available data.

### **STEP 3: Synopsis & Adaptation Options**

For each identified vulnerability in STEP 2, develop adaptation options to avoid, minimize or mitigate future negative impacts, while delivering intended benefits. Use adaptation support resources to find potential options.

## What projects can I use the Checklist for?

Project Types	Value of completing the Checklist for this type of project
<b>Restoration</b>	Assess the suitability of restoration project design for species, habitat or ecosystem function under future conditions.
<b>Habitat /Species Conservation</b>	Determine if a location will be suitable habitat for target species or as a habitat loss/damage mitigation for the long-term. If conditions will not remain suitable, the location may be deprioritized or an alternative site may be preferred.
<b>Permits</b>	Consider how climate change will affect the ability of the project to meet the requirements of a regulatory permit over the project's lifetime.
<b>Grant Review</b>	Systematically compare the ability of a proposal to deliver on its goals given the implications of climate change. Compare between proposals.
<b>Infrastructure</b>	Assess the suitability of infrastructure siting, design and function for future conditions.
<b>Scientific Research</b>	Consider how climate change may affect the results of the research if not incorporated into the study design.
<b>Other</b>	For any project, you can use the Checklist to assess how climate change will affect long-term sustainability and effectiveness, in order to better design or site a project for intended benefits.

# STEP 1: Climate Quick Check

## Type of project

- Restoration
- Habitat/Species Conservation (e.g., land acquisition, mitigation)
- Permits
- Grant Review
- Scientific Research
- Infrastructure (e.g., structures, fences, roads, boat launch, hatcheries)
- Other:

Describe your Project (purpose, goals, location, scope/scale, timeframe, partners, management context):

If your project is...	Might it be affected now or in the future by...	YES	NO	DON'T KNOW	If you answered YES or DON'T KNOW, then...
<b>Near a shoreline</b>	...lake level change?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation B</b>
	...flooding?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...erosion or slope stability?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
<b>Aquatic</b>	...increased water temperatures?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation A &amp; C</b>
	...diminished dissolved oxygen levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation A &amp; C</b>
	...altered pH?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation E</b>
	...reduced water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation E</b>
	...algal blooms?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...change in total flow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
<b>In terrestrial, vegetated habitat</b>	...change in flow timing?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...changes in temperature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation A</b>
	...changes in precipitation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...drought?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation D</b>
<b>Infrastructure</b>	...changes in vegetation composition?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation E</b>
	...changes in temperature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation A</b>
	...loss of utilities (water, sewer, power)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluations A, C, D &amp; F</b>
	...lake level change?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation B</b>
	...flooding?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...stormwater or water control failure?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...drought?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation C</b>
	...wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation D</b>
...greenhouse gas emissions reduction policies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	complete <b>STEP 2 Evaluation F</b>	

For any time where you answered...

**“YES”, continue to STEP 2 to explain how.**

**“NO”, checklist is not required.**

**“DON'T KNOW”, follow instructions in STEP 2 to find out.**

## STEP 2: Evaluation of Climate Impact on a Project

---

### **A** Evaluate suitability of project site, species and/or infrastructure to future air & water temperature patterns and determine impact

**Explain** your project's suitability to future temperatures referring to data sources and local knowledge. When answering, consider how this may interact with other aspects of climate change you are evaluating.

- Does future temperature look different than present?
- Will the amount of change projected affect your project site, species, or infrastructure?
- How may water quality be affected (pH, dissolved oxygen, temperature, turbidity, salinity, contaminants, nutrients, sedimentation)?
- Will temperature change affect crucial functions (e.g., evapotranspiration)?
- Will invasive species benefit from new conditions?

**To answer these questions, use regional temperature projections.**

#### **Possible Data Sources:**

Great Lakes Regional Climate Change Maps:  
<http://glisa.umich.edu/resources/great-lakes-regional-climate-change-maps>  
<https://nelson.wisc.edu/ccr/resources/visualization-and-tools.php>

NOAA Climate Explorer: <https://crt-climate-explorer.nemac.org>

## STEP 2: Evaluation of Climate Impact on a Project

---

### **B** Evaluate local lake level projections relevant to project area and determine impact

**Explain** how lake level changes may affect your project. When answering, consider how this many interact with other aspects of climate change you are evaluating.

- Does future lake level look different than present?
- Will the amount of change projected affect your project site, species or infrastructure, including pumps?
- Will it affect slope stability or erosion?

**To answer these questions, use regional hydrological projections for 2100 (or other date relevant for the project) and local knowledge related to flooding.**

Map these lake level projections for your project area (inclusive of its access corridors, key infrastructure) in relation to projected future flood zones and frequently flooded areas (both episodic and chronic) based on the lake level projections. You can use a flood viewer or your own GIS. If options exist, use high greenhouse gas emissions scenarios (e.g., RCP8.5 or similar), likely or 50% assessed probability.

#### **Possible Data Sources:**

Lake Level Viewer: <https://coast.noaa.gov/llv/>

FEMA Flood Maps: <https://msc.fema.gov/portal/home>

Michigan High Risk Erosion Areas:

<https://www.michigan.gov/egle/about/organization/water-resources/shoreland-management/high-risk-erosion-areas>

## STEP 2: Evaluation of Climate Impact on a Project

---

### **C** Evaluate project suitability for future precipitation patterns and determine impact

**Explain** your project's suitability to future precipitation patterns referring to data sources and local knowledge. When answering, consider how this many interact with other aspects of climate change you are evaluating.

- Does future precipitation (annual or seasonally) look different than present? Is timing and intensity of precipitation projected to change? Will there be a change from snow to rain?
- Will the amount of change projected diminish project benefits, negatively impact the ability to meet project goals, negatively affect design integrity, or otherwise affect the project?
- Will there be flooding or other peak flow challenges?
- Will there be slope instability or erosion?
- Will water control or stormwater management design still function?
- Is water management reliant on pumping systems and could they fail?
- Will needed utility (water, sewer, power, broadband) services be available during flooding?
- Will there be unacceptable low flow, or prolonged seasonal, annual or multi-year drought?
- Will invasive species benefit from new conditions?
- How may water quality be affected (pH, dissolved oxygen, temperature, turbidity, salinity contaminants, nutrients, sedimentation)?

**To answer these questions, use regional precipitation, stream flow, and flood projections.**

#### **Possible Data Sources:**

##### **Precipitation Data**

Great Lakes Regional Climate Change Maps: <http://glisa.umich.edu/resources/great-lakes-regional-climate-change-maps>

NOAA Climate Explorer: <https://crt-climate-explorer.nemac.org>

##### **Stream Flow Data**

Calculate or locate stream flow projections for your project site with a time horizon relevant to the lifetime of the project (10 years, 25 years, 50 years, or 100 years). Consider not just annual flow, but also temperature, seasonal variability, high flow and low flow periods.

Streamflow Metrics: [https://www.fs.usda.gov/rm/boise/AWAE/projects/modeled\\_stream\\_flow\\_metrics.shtml](https://www.fs.usda.gov/rm/boise/AWAE/projects/modeled_stream_flow_metrics.shtml)

##### **Flood Data**

Map your project area (inclusive of its access corridors, key infrastructure) in relation to flood zones, frequently flooded areas (both episodic and chronic) and implications for slope stability and erosion.

FEMA Flood Maps: <https://msc.fema.gov/portal/home>

Local flood zone or wetland data—if available

##### **Slope Stability Data**

Michigan High Risk Erosion Areas:

<https://www.michigan.gov/egle/about/organization/water-resources/shoreland-management/high-risk-erosion-areas>

## STEP 2: Evaluation of Climate Impact on a Project

---

### **D** Evaluate project vulnerability to wildfire and determine impact

**Explain** how your project may be affected by or affect wildfire. When answering, consider how this may interact with other aspects of climate change you are evaluating.

- Will long-term temperature and precipitation trends cause shifts in vegetation and habitats affecting your project's vulnerability to wildfire or the ability to use land management techniques that rely on fire (e.g., prescribed burn)?
- Will needed utility (water, sewer, power, broadband) services be available during fire, under fire prevention measures (planned power outages), and/or fire response measures (fuel breaks, water harvest)?

**To answer these questions, map project area and its access corridors against Wildfire Hazard Areas or other local wildfire risk mapping tools.**

#### **Possible Data Sources:**

Wildfire Risk to Communities: <https://wildfirerisk.org/explore/>

USGS Landfire: <https://landfire.gov/viewer/viewer.html>

## STEP 2: Evaluation of Climate Impact on a Project

---

**E** Evaluate project vulnerability to changes in ecological function (e.g., shifts in phenology, range, composition, connectivity, fitness)

**Explain** how future conditions could affect ecological function, including ecosystem services, vital to the project and how that change could adversely affect project success. When answering, consider how this many interact with other aspects of climate change you are evaluating.

### Possible Data Sources:

#### Restoration

Seedlot Selection Tool: <https://seedlotselectiontool.org/sst/>

#### Forest vegetation change

Climate Change Projections for Tree Species in the Northwoods:  
<https://forestadaptation.org/assess>

Climate Forest Vegetation Simulator:  
<https://www.fs.usda.gov/fvs/whatis/climate-fvs.shtml>

Climate Change Tree Atlas:  
<https://www.fs.usda.gov/ccrc/tool/climate-change-tree-atlas>

#### Species Responses

Vulnerability Assessments:

[https://www.canr.msu.edu/uploads/234/62936/CLIMATE\\_CHANGE.pdf](https://www.canr.msu.edu/uploads/234/62936/CLIMATE_CHANGE.pdf)

#### Invasive Species

Invasive Range Expander Listing Tool:  
<https://www.eddmaps.org/rangeshiftlisting/>

## STEP 2: Evaluation of Climate Impact on a Project

---

### **F** Evaluate project contribution to greenhouse gas emissions (emissions and sequestration)

**Explain** your project's contribution (during implementation and maintenance) to greenhouse gas emissions and carbon sequestration. When answering, consider how this many interact with other aspects of climate change you are evaluating.

- Does the project require use of an energy source (e.g., transportation, buildings, pumps)?
- Will this result in greenhouse gas emissions from fossil fuel use?
- Could there be greenhouse gas emissions from land use change or fire?
- Could the affordability or availability of utilities (water, sewer, power) change given changing carbon policies and/or extreme events (fire, flood, wind)?
- Is carbon sequestration a consideration for your project (If so, discuss potential risks to permanence, leakage, additionality)?

# STEP 3: Impact Summary & Adaptation Options

Check the Issues for which your STEP 2 evaluation indicates an impact:		Implications of this issue for the project being assessed are:	Adaptation actions to increase the suitability of the project to future conditions. (If needed, use Resources for Identifying Adaptation Options on the next page.)
<input type="checkbox"/>	<b>Temperature (A)</b>		
<input type="checkbox"/>	<b>Lake Level Change (B)</b>		
<input type="checkbox"/>	<b>Precipitation (C)</b>		
<input type="checkbox"/>	<b>Wildfire (D)</b>		
<input type="checkbox"/>	<b>Ecological Function (E)</b>		
<input type="checkbox"/>	<b>Greenhouse Gas Emissions (F)</b>		

# Resources for Identifying Adaptation Options

For any assessments that indicate that there is a climate change vulnerability or risk to the project, policy, permit or site, the Climate Adaptation Knowledge Exchange ([www.CAKEx.org](http://www.CAKEx.org)) can help identify ways to minimize or ameliorate that risk or vulnerability. The CAKE database is designed to identify examples of adaptation strategies for conditions that match your findings from the Checklist. To conduct a targeted search for case study examples and other resources:

1. Open [www.CAKEx.org](http://www.CAKEx.org)
2. From the green left-hand navigation bar select RESOURCE > CASE STUDIES
3. In the blue right-hand navigation bar select the CLIMATE CHANGE & IMPACTS that match the identified issues from STEP 2 (consider doing these one at a time or in combinations that interact). Also select the SECTOR, REGION, and HABITAT that best describe the project, policy or site being considered with the Checklist.
4. Browse the results of this focused search to glean ideas regarding how others have addressed challenges similar to what you have identified in STEP 2.
5. If you do not find any suitable results, consider expanding the scope of the search by adding RESOURCE TYPES (DOCUMENTS, TOOLS) in the blue right hand navigation bar.

## Additional Resource List

Can't find what you need on CAKE? Consider exploring these collections and guidance tools.

# Michigan Department of Natural Resources Adaptation Checklist for Climate Smart Projects

## Acknowledgments

In order to make this document useful to natural resource management agencies, the authors collaborated with a working group of agency staff from several states to better understand the full range of possible applications and the variability between jurisdictions and geographies in relation to management practice and climate change impact. This group also provided guidance on the key data resources they would employ to better understand local climate effects. This working group included the Checklist co-authors, Lynn Helbrecht (Washington State Department of Fish & Wildlife), James Hansen (California Department of Fish & Wildlife), and Christopher Hoving (Michigan Department of Natural Resources), as well as Davia Palmeri (Oregon Department of Fish & Wildlife), Leona Svancara (Idaho Department of Fish & Game), and Maggie Johnson (previously with the Association of Fish & Wildlife Agencies).

This edition benefited from review by staff of the Michigan Department of Natural Resources, including Jeremiah Heise, Don Bonnette and Clay Buchanan.

This project was supported by the Northwest Climate Adaptation Science Center (NW CASC) through contract #140G0120P0118 from the United States Geological Survey (USGS). Its contents are solely the responsibility of the authors and do not necessarily represent the views of the NW CASC or the USGS. This product is submitted for publication with the understanding that the United States Government is authorized to reproduce and distribute reprints for Governmental purposes.
